

# KINGBIRD

New York State Ornithological Association, Inc. Vol. 61 No. 3 September 2011

THE KINGBIRD (ISSN 0023-1606), published quarterly (March, June, September, December), is a peer-reviewed publication of the New York State Ornithological Association, Inc., which has been organized to further the study of bird life and to disseminate knowledge thereof, to educate the public in the need for conserving natural resources, and to document the ornithology of the state and maintain the official Checklist of the Birds of New York State.

#### Website: http://nybirds.org

Members of NYSOA receive *The Kingbird* and the newsletter *New York Birders*. Membership is available in the following annual categories:

Individual	\$28	Contributing	\$50
Family	\$30	Kingbird Club	\$100
Supporting	\$35	Student	\$15

Clubs and organizations - variable, inquire.

Institutional subscriptions to *The Kingbird* are \$25 annually.

All amounts stated above are payable in US funds only, with checks payable to NYSOA. Add \$10 to all categories for addresses in Canada or Mexico, \$20 for all other non-US addresses.

**Applications for membership and subscriptions:** New York State Ornithological Association, Inc., P.O. Box 296, Somers, NY 10589.

Requests for single copies and back numbers (\$5.00 each): New York State Ornithological Association, Inc., P.O. Box 296, Somers, NY 10589.

#### THE FIRE ISLAND HAWKWATCH

#### Robert J Kurtz

27 Smith Street, Valley Stream, NY

The Fire Island Hawkwatch (FIRE) is a fall season hawkwatch located at the meeting point of the Fire Island National Seashore (FINS) and the Robert Moses State Park (RMSP). It is a barrier island watch and therefore differs in a number of interesting ways from the vast majority of North American hawkwatches, which are on the mainland. Although the number of raptor species that occur commonly at Fire Island is somewhat restricted compared to mainland watches, FIRE offers exceptional opportunities to see migrating Osprey, Northern Harrier, and falcons, given favorable (northerly) winds. We welcome all raptors, of course, but nature holds the cards and these three types are without question the focus of the FIRE watch.

When—The window for the observation of migrating raptors at the watch is 20 August–20 November, but from 20 August-9 September and 1-20 November, the watch is only conducted on days with favorable winds. The rest of the time the watch is staffed every day unless weather conditions are very bad (e.g., heavy all day rains, hurricanes, etc.). The time frame between 10 September and 31 October is used for statistical analyses, performed by the duo of Drew Panko and Trudy Battaly, yielding insights regarding population trends and comparisons to other watches.

Access and weather—This watch is of course open to one and all, especially those interested in diurnal raptors. Should your time be limited, choose a day when strong (10+ mph) northwest winds are predicted, especially from 21 September-15 October, our peak timeframe. If you are mostly interested in *Buteos* I would suggest an inland watch, as we average only 1-2 individuals of this genus per year.

For those not too familiar with Long Island and its barrier beaches, a search of *Google Earth* will help in getting you to the vicinity of the watch. Once you cross the last bridge heading south on the Robert Moses Causeway there is a traffic circle and tower immediately in front of you. Proceed around the circle 270 degrees and head east. Go past parking field #4 and enter the last field, #5. Fee collection varies seasonally and in other ways, but if you arrive before 7 a.m. you can avoid a parking fee. There are two routes to reach the watch from the east end of parking lot #5. The fastest way is to follow the cinder path that leads out of the parking lot and parallels the northeast exit from field #5. Just follow the cinder path to the east; once you've rounded the bend on this path, the hawkwatch platform will become evident rather quickly. Alternatively, one could take the boardwalk; the entrance is located about half way north/south at the east end of the parking lot. Take the boardwalk to the point where it meets

the road into FINS, turn to the left and walk a short way back up that road; the platform is located ahead on a small rise.

The platform is not large and access on busy days is on a first come first served basis. It can get crowded during the peak of the migration, especially with north or northwest winds. We do try to keep some space available on the upper tier of the platform for the official daily observer(s) since they are, after all, responsible for the count.

We also have gotten an impressive diversity of non-raptor species (including many RBA- and even NYSARC-worthy species!), but these would be the focus of a separate article. As a note of caution, please stay out of grassy areas/underbrush. Ticks can be numerous and many harbor diseases that cause grief to humans—not just Lyme disease, but also other infections that can be substantially more serious.

History of the Watch—The watch at Fire Island was informal with little to no formal data gathered before 1982. Basically, it was a small group of 'raptorphiles' who knew that the Fall at the barrier beach on favorable winds meant there would be a hawk flight and so they each watched from their favorite site in the vicinity of where the platform now stands. Then in 1982 it was decided that a formal hawkwatch should be established; the way was led by Drew Panko and Ted Leviness and we became an official HMANA (Hawk Migration Association of North America) site. A designated acronym was chosen: Fire Island Raptor Enumerators (FIRE). The watch site at the beginning was located close to where the platform is now, but the platform itself, built by the State of New York, dates only to circa 2000. Without going into details, let's just say we were amazed when we heard we were going to get a platform and actually watched it being built! I must add here that the tireless efforts of the late John Fritz were most instrumental in the platform coming to fruition.

Collection of data on migrating birds, with the major emphasis being diurnal raptors, began in the fall of 1982. It has always been an all-volunteer watch staffed by a cadre of dedicated watchers; early on most but not all of the watchers came from Westchester County—quite a trek! The 1982 effort was preliminary and as such there was only 86 hours of coverage on 14 days. For the next five years the average coverage was 250 hours and 38 days of observation. Over the last 20 years the FIRE hawkwatch has matured with regard to total hours and days of coverage (i.e., an average of 432 hours over 61 days of coverage). During 2010 there were 465 hours and 63 days of observation; given weather conditions and the relatively short season associated with this watch, these numbers are about 'maxed out'.

The number of diurnal raptors seen has varied substantially over the last 20 year. Reasons for the variation likely include weather and breeding success of those species and populations that pass the point of our watch. Changes in the number of hawks can occur dramatically from year to year, for instance, in 2009 we recorded only 2893 raptors during 414 hours (64 days) of coverage; this was the lowest number of diurnal raptors since 1984 when only 212 hours of coverage occurred. Then, in 2010 with 463 hours of coverage we tallied 5781, or

almost exactly twice the number of individuals as during 2009! During 2010 four records for species totals fell, namely Osprey (old record 508, now 557), Northern Harrier (434, now 523), Merlin (1648, now 2119), Peregrine (320, now 325). Additionally, the beleaguered American Kestrel numbers which had fallen to a catastrophic level of 518 in 2009 bounced back to an encouraging 1645! The trend for Sharp-shinned Hawk numbers, which has also shown a dismal decline, was also reversed in 2010; it rose from 291 in 2009 to 543 in 2010. This much variation from year to year is dramatic and, again, likely the result of weather and breeding success. The watch is always hoping for strong 10-20 MPH winds out of the northwest. This wind direction was definitely present during the 2010 watch season, a clear change from the previous year. In fact, the 2010 season featured the most favorable winds we've seen in years.

#### SPECIES ACCOUNTS AND TRENDS

Trends of course are a critical component of the migration monitoring efforts. Any given watch site is not likely to show meaningful trends (perhaps some exceptions exist, such as Hawk Mountain Sanctuary and Cape May), in part due to inherent variables. It is, however, the combined observations at all of the HMANA sites that provide a window into population trends. The information presented below is the result of the continuous effort of Drew Panko and Trudy Battaly, without whose efforts the following population profiles would be unlikely to have been attempted except in the most general way.

Table 1. Seasonal averages for nine species of diurnal raptors at the FIRE watch, 1991-2010. OS—Osprey, BE—Bald Eagle, NH—Northern Harrier, SS—Sharpshinned Hawk, CH—Cooper's Hawk, NG—Northern Goshawk, AK—American Kestrel, ML—Merlin, PG—Peregrine Falcon.

OS	BE	NH	SS	CH	NG	AK	ML	PG	Total	Hrs	Days
305	3	230	455	28	2	1360	1291	180	3876	432	61

#### Osprey

The trend analysis at Fire Island has been very positive, unlike Lighthouse Point, CT (LPH), where the trend has been negative (but not as negative as FIRE is positive), while the trend at Cape May Hawk Watch, NJ (CMHW) is almost flat. During the 2010 season, both Cape May and FIRE exhibited a sharp increase in the number of Osprey passing by; this was not the case at LHP, where numbers remained below average. Why this 'problem' at LPH? Good question! Considering observational data it would appear that the decline at LPH may be due to a local condition associated with nesting Osprey along the coast east of LHP in Connecticut and Rhode Island. Additionally, the Osprey passing at LHP are only remotely likely to be some of the same individuals as those seen at

FIRE due to location of the LHP watch in relation to FIRE, approximately 50 miles to the north-northeast.

#### **Bald Eagle**

While numbers seen at the FIRE watch are too small to allow true statistical conclusions and comparisons, it is interesting to note that the trends at the FIRE watch mimic to some degree the very positive trends at mainland sites.

#### Northern Harrier

Numbers were up sharply at all three sites (FIRE, LHP, and CMHW). Given that the vast majority of harriers seen at FIRE during 2010 were hatch year (HY) birds, it seems reasonable to conclude that a very successful hatch year for this species took place. The trend, however, is somewhat confounding in that at FIRE there is a substantial positive trend while at LHP and CMHW the trends are negative. It is possible that several years of less than successful nesting resulted in fewer adults and since both LHP and CMHW are on the mainland, they are more likely to see more adult harrier in their totals versus FIRE, hence a negative slope.

#### **Sharp-shinned Hawk**

Alas, for this species, the smallest of the North American *Accipiters*, the trend is downward at all three sites and at about the same slope. The only encouraging sign is that all three watches had moderately to sharply increased numbers in 2010.

#### Cooper's Hawk

Neither statistical analysis nor comparison to other hawkwatches was performed. It can be said that in general the number of Cooper's Hawk at FIRE for the last six years are the highest numbers since the watch began.

#### Northern Goshawk

No analysis could be performed because only an average of two individuals per Fall season pass the FIRE watch.

#### American Kestrel

Sadly, the trend for the smallest of North American falcons is quite negative and about at the same slope at all three hawkwatches analyzed. As with the Sharpshinned Hawk, the 2010 season provided a bright spot in that all three sites exhibited a sharp increase in sightings. And as with the Sharp-shinned Hawk, it will take several years of improved nesting success to turn the tide of the decline.

#### Merlin

While Merlin trends have remained nearly constant for LHP and CMHW, the trend at FIRE is up at a substantial slope, even without the 2010 record setting year. The upward trend is, however, confounded by the first few years of records

(i.e., 1982-1984) where only low numbers of Merlin were seen, most likely due to hours expended at the watch. If one eliminates these years as not representative due to effort, then the Merlin trend line is still positive but not in a statistically significant way. By adding the years 1984 and 2010 (record year) to the analysis, the positive trend slope is increased. Adding these two years represent the 'front' and 'back' end of the Merlin data collected to date, however, the statistical analysis to determine if this positive increase in slope is statistically significant has not yet been undertaken. The 'gut feeling' is that while the positive trend has increased with the addition of these two years, the slope is not steep enough to indicate a positive statistical increase. Still, the math needs to be performed to accept or reject the 'gut feeling'. As Drew Panko stated, he would not trust the trend unless it continued for another few years.

#### **Peregrine Falcon**

All three watches analyzed have a very positive slope; the only rational conclusion is that the species population is growing. The growth is no doubt due to the end of the use of DDT as well as the Peregrine hacking program that has resulted in a remarkable increase in local nesting throughout the northeastern USA.

\*\*\*\*

As birders, we know that bird populations are dynamic and changes will continue to occur. We at the FIRE hawkwatch will continue to observe, report and calculate the trends of the diurnal raptors passing by each fall and forward our information in our efforts to continue to add to the raptor record.

#### **ACKNOWLEDGMENTS**

To all the volunteers that help out at the watch, a hearty thank you for your efforts, without which the data could never have existed or continue to be collected; to Drew Panko and Ted Leviness for their efforts to actually initiate the watch; and of course to Drew Panko and Trudy Battaly for their unflagging efforts at the yearly organization of the watch, including but not limited to recruiting new watchers, and for their yeoman's work performing analysis of the data and reviewing this document.

### A "SOOTY" FOX SPARROW IN CENTRAL PARK, NEW YORK CITY

#### Stephen Chang

spc2001@hotmail.com

On 13 May 2010 in the early morning, I was birding on the wood chip path on the east side of Strawberry Fields in Central Park, New York City. Near the north end of the path, I noticed three sparrows feeding at a bend in the path about 70 feet away. Two were White-crowned Sparrows, the third I recognized as a Fox Sparrow. However, this sparrow was not the usual "Red" form that we see in the East. It was much darker and without the obvious red color of the "Red" Fox Sparrow. I had seen the "Sooty" form of the Fox Sparrow in Seward, Alaska, and thought the bird in front of me could be this form. Since I was not familiar with the other Fox Sparrow forms, I could only say that this bird was not a "Red", but one of the forms found in the West.

After I had observed the bird for about two minutes, Andrew Rubenfeld joined me and also saw the bird and agreed it was not a "Red". The Fox Sparrow at one point came within twenty feet of us, then flew off. Importantly, Andrew put out word of our finding via a chain of communications: he told Stephanie Seymour and Rob Fanning, who were nearby, they called Karen Fung. She sent out emails to the New York birding lists. Thus many birders were alerted and were able to view and photograph the bird. The bird was seen later in the morning and afternoon, and remained at least through the following day.

In size, the bird was slightly larger than the White-crowned Sparrows. Its behavior was typical of sparrows, initially feeding on the ground with White-crowned Sparrows. In a subsequent viewing in the afternoon it was scratching and feeding in dry leaves underneath a bush.

The bird had a dark, gray-brown head with no obvious pattern, no streaking on the head. Its crown was very slightly rufous. A small part of the chin was clear and white. The breast was heavily streaked, with the streaking converging onto a central area. The streaking extended to the belly. Its back was a plain, dark brown. The tail was dark brown, but with a slight rufous on the tail and rump; the slightly rufous tail was only apparent in the afternoon when viewing conditions were brighter. The wings were plain and about the same color as the back, but it had one white feather edge at the bend of the folded wing, on both left and right sides. The eye was dark. It had a thin eye ring (in photographs a break in the rear is visible). The bill was a uniform gray. Overall, it was a very dark bird. See Figure 2, page 242.

This bird comports well with descriptions of the "Sooty" Fox Sparrow in field guides (Sibley 2000, Peterson 2008). The lower mandible is usually described as having yellow at the base, but apparently "Sootys" with all gray bills are also seen (Patterson 2007). The "Sooty" Fox Sparrow breeds along the

coast from the Aleutians to northwest Washington State. They winter mainly on the coast from central British Columbia to southern California.

#### **The Fox Sparrow Complex**

There are 18 subspecies of Fox Sparrow generally recognized (Weckstein 2002). These can be grouped into four races, with the potential of the complex being split into four corresponding species: "Red" Fox Sparrow (*iliaca* group, the usual Fox Sparrow in the East), "Sooty" Fox Sparrow (*unalaschensis* group), "Slate-colored" Fox Sparrow (*schistacea* group), and "Thick-billed" Fox Sparrow (*megarhyncha* group).

Beadle and Rising (2002) consider Fox Sparrows as comprising four species. The issue of splitting is too complex and unsettled for a full discussion here. On the one hand, morphology and mitochondrial DNA analysis suggest four species (Zink and Weckstein 2003). On the other hand, there is some interbreeding between the groups, especially between the "Slate-colored" and "Thick-billed" groups. Further, microsatellite analysis showed clear separation of the "Red", "Sooty" and "Thick-billed" groups, but less distinct separation of the "Slate-colored" group from the others (Zink 2008). More research is needed. The AOU last considered, and did not approve, the potential split in 2003 (Banks 2004).

#### Other non-iliaca Fox Sparrow Reports

There is at least one prior "Sooty" Fox Sparrow sighting reported from New York, a bird seen 7 May 2005 in Vermontville, Franklin County (Peterson 2005) as reported in *The Kingbird* season highlights. In the Northeast, there is at least one "Sooty" sighting, from New Hampshire 9-12 December 2009 (Chase 2009). However, a recent analysis has raised the possibility that this was the subspecies altivagans (Brinkley 2010). This subspecies breeds in western Canada and winters in California, and has been grouped with either iliaca or schistacea by various authors. Interestingly, on 12 May 1971, a Fox Sparrow was collected at Fire Island, Suffolk County and identified as altivagans (Buckley 1973). A possible "Slate-colored" Fox Sparrow was reported in New York in December 2003, but the sighting was not accepted by the NYS Avian Records Committee (NYSARC 2006), which considered it unidentifiable to subspecies on the basis of the documentation. On 5 December 1996, a non-iliaca Fox Sparrow was seen in Storrs, Connecticut, and was either unalaschensis or altivagans (Szantyr 1997). Given these uncertainties, a closer examination of the Central Park bird seems warranted. A thorough analysis of this, and other northeastern North American records of western Fox Sparrows is in preparation.

## HYBRID BLUE-WINGED TEAL X NORTHERN SHOVELER MONTEZUMA NATIONAL WILDLIFE REFUGE, SENECA CO., NEW YORK, 9 MAY 2011

#### Christopher L. Wood and Jessie H. Barry

Cornell Lab of Ornithology 159 Sapsucker Woods Road, Ithaca, NY 14850 pinicola@gmail.com

On the morning of 9 May 2011, we were returning to Ithaca from Rochester and decided to take a quick look at the birds along the Wildlife Drive at Montezuma NWR, Seneca County. We arrived at the visitor center and as we scanned the shallow pool with binoculars we found an odd looking duck with the Northern Shovelers (Anas clypeata). It appeared similar to the shovelers in shape and overall coloration, but slightly smaller with a slightly smaller bill (bill similar in shape to a Cinnamon Teal, Anas cyanoptera). The most distinctive aspect of the bird was a bold white facial crescent, which recalled a narrow version of that seen on a male Blue-winged Teal (Anas discors). After looking in a scope, we could easily see other characters in common with Blue-winged Teal including brown spotted breast, spotting that continued onto the sides and flanks (which were rufous toned, unlike Blue-winged Teal). We quickly realized this was a hybrid male Blue-winged Teal x Northern Shoveler, a rare hybrid combination which neither of us had seen before. We were able to obtain a series of fairly good photographs that demonstrate why we identified this as a hybrid Bluewinged Teal x Northern Shoveler. Two photos, with detailed discussion of identification included in the captions, are presented as Figures 3 & 4 on pages 242-243 of this issue.

The bird also bears some similarity to Australian Shoveler (*Anas rhynchotis*) of Australia and New Zealand, but that species has a much larger bill, heavy markings across the breast, and blue-gray tones to the head.

The entire time we watched the bird, it remained with or near Northern Shovelers. It spent a lot of time actively displaying near a female or aggressively chasing or biting male Northern Shovelers.

#### OTHER RECORDS OF THIS HYBRID COMBINATION

We are aware of only one other hybrid Northern Shoveler x Blue-winged Teal reported from New York State, a bird photographed at Prospect Park, Kings County (Brooklyn) on 22 January 2010. Initially identified as an Australian Shoveler, photographs on the *City Birder* blog (Jett 2010) allow for confident identification as a hybrid:

http://citybirder.blogspot.com/2010/01/strange-waterfowl.html

One of these photographs is reproduced here as Figure 5, on page 243. As with the bird that we photographed, note that the Prospect Park bird has a green head and finer markings on the breast than one would expect in Australian Shoveler (Madge and Burn 1988).

Hybrids between Blue-winged Teal and Northern Shoveler are rare in the wild, but this combination has been documented several other times from North America, mostly in the West. There are also several records of this hybrid combination from Europe (e.g., United Kingdom and Germany), some of which may be the result of wild vagrant Blue-winged Teal hybridizing with native Northern Shoveler. Vagrant Blue-winged Teal often appear with Northern Shoveler in Europe and it may be more likely for vagrants to hybridize in Europe than North America given the small number of prospective mates for Blue-winged Teal. For more information on occurrence outside New York, see references in McCarthy (2006).

#### **ACKNOWLEDGMENTS**

We would like to thank Shai Mitra for encouraging us to submit this short piece and for comments that improved it.

## NEW YORK STATE ORNITHOLOGICAL ASSOCIATION, INC. 63RD ANNUAL MEETING SAVANNAH, NEW YORK, 23 OCTOBER 2010

The 63rd Annual Meeting of the New York State Ornithological Association, Inc. (NYSOA), co-hosted by the Montezuma Audubon Center and Onondaga Audubon Society, was held at the Montezuma Audubon Center, Savannah, NY on 23 October 2010. The meeting was called to order at 9:30 a.m. Roll call of member clubs revealed 35 delegates from 21 clubs were in attendance and that a quorum was present. John Confer made a motion to approve the 26 September 2009 Annual Meeting minutes as published in *The Kingbird* Vol. 59 No. 4. Kathy Schneider seconded the motion, and it was unanimously approved.

#### President's Report by Carena Pooth

This is a summary of the President's Report. The full text is available upon request. NYSOA continues to be a strong organization and a leader among similar groups throughout the US. NYSOA owes its success and its fine reputation to a veritable army of people who have volunteered their services over the 62 years since its inception. I'd like to thank the board and all the committee chairs and committee members who have worked so hard over the past year to help NYSOA carry out its mission.

NYSOA continues to work hard to educate the public as well as government agencies and lawmakers in order to encourage responsible decision making on conservation matters. NYSOA's printed publications set a standard to which most other organizations can only aspire. Online media play an increasing role in our communications and education efforts. In January 2010, a searchable archive of 57 years of *The Kingbird* was launched on the NYSOA web site, free to the public.

NYSARC completed both the 2007 and 2008 reports and expects to publish the 2009 report very soon. This sets the stage for annual reports to be published in a timely manner going forward.

The two year old New York State Young Birders Club (NYSYBC) conducted monthly field trips sponsored by Partner Clubs and awarded six scholarships to help fund young birders' attendance at birding camps, special birding trips, and educational programs.

NYSOA is working cooperatively with the Cornell Lab of Ornithology to encourage the use of eBird for routine sightings while pushing for improved data extraction capabilities for club compilers as well as *Kingbird* editors.

A new Publicity and Marketing Committee was established in November 2009. The committee's mission is to raise awareness of NYSOA and to implement promotional programs and materials to increase membership.

#### Treasurer's Report by Andy Mason

Andy provided the following documents for the year ending December 31, 2009: Balance Sheet, Statement of Fund Activity and Balances, and the Detailed Statement of General Operating Fund Activity. Andy also provided an itemized Funds Report and NYS Young Birders Club Fund through October 21, 2010. He thanked the previous Treasurer, Bill Reeves, for his assistance in compiling the 2009 financial statements. Andy pointed out that six *Kingbird* issues were printed in 2009, instead of the normal four issues. PayPal capability, for new/renewal online memberships, was added in the past year. For the first 3/4 of the year, PayPal memberships accounted for \$4,000 out of the \$26,000 total to date. Andy encouraged members to consider increasing their level of support when renewing their membership.

None.

#### **Department of Environmental Conservation Report**

As always, the DEC was invited to attend and report at the Annual Meeting. Due to other obligations, the DEC Report was given first. Gordon Batcheller, Chief of the Bureau of Wildlife for the NYS Department of Environmental Conservation (DEC), discussed highlights of the 13-page DEC Report, which we will provide to any NYSOA member who requests it. The DEC has faced workforce reductions of 22% since 2008, with hundreds more job losses coming through retirement and layoffs at the end of 2010. Fish hatcheries may close and many programs are in jeopardy. The outlook for 2011 looks bleak. Gordon outlined some of the DEC priorities for 2011: The Endangered Species list will be updated. Incidental take permits for endangered species will only be issued if the habitat is benefitted in the process. The DEC will also focus on youth with a youth deer season, and they plan to lower the hunting age to 12. Gordon pointed out the common interests of hunters and birders, adding that hunting, fishing, and trapping licenses bring in millions of dollars for NYSDEC, with most of that revenue coming from deer hunters. Gordon commented on the lead ammunition issue and said the DEC is vigorously enforcing the law to use lead-free ammunition in waterfowl hunting. He also plans to give hunters non-toxic ammunition to try out and report on to the DEC. (A similar program was used successfully in Arizona.) Several NYSOA members brought up the Doublecrested Cormorant control program and asked Gordon to re-evaluate the killing given the new data showing that this species is eating invasive fish. Another member brought up the State Forest Management Plan—praising the majority of the plan but raising serious concern about the section that would allow for Natural Gas hydrofracking in State Forests.

#### **NYSOA Committee Reports and Elections**

Carena Pooth gave the Archives Report for Brenda Best. She reported that Brenda has transitioned everything she needs from Phyllis Jones, the former archivist.

Barbara Butler gave the Membership Report for Berna Lincoln. She provided a detailed Membership Report in a handout for members. There are currently 523 members plus 51 life members. There are 41 member clubs. (Last year, there were 525 members and 45 member clubs.)

Chita McKinney made a motion to approve Southern Adirondack Audubon as a new member club. Gerry Smith seconded the motion and it was unanimously approved.

Kathy Schneider gave the Publicity Report. She reported that the committee printed a new postcard to publicize NYSOA. The primary goal of the committee is to increase both individual and club memberships. With the help of NYSOA member clubs, a field trip program will be re-instituted in 2011. A raffle fundraiser was held with prizes awarded at the Annual Meeting. A door prize for free membership was given to an attendee who was not already an individual member of NYSOA.

Andy Mason gave the Conservation Report. Andy provided a detailed summary of the prior year's activities in a handout for members. He summarized the conservation issues the committee has worked on, letters that were written, and articles provided for the conservation column in *New York Birders*. John Confer brought up the State Forest Management Plan—praising 234 pages of the plan to manage forests, but concerned by 10 pages that discussed natural gas development in State Forests. The process used, hydrofracking, is a huge threat to the environment—polluting aquifers, producing pollutants and acres of waste water, and the development of roads to transport millions of gallons of water used in the process. Natural gas development threatens wildlife and ecosystems. John encouraged people to send comments to the DEC asking that natural gas drilling not be allowed on State lands. Gerry Smith reported that Onondaga Audubon had already commented on this issue, and he encouraged members to also call Andrew Cuomo with comments.

Audubon NY is also working on this issue. Cayuga Bird Club also wrote comments, and they asked that NYSOA also send a letter. Bill Lee reported that hydrofracking in NYS will be regulated in May 2011.

Carena Pooth gave the New York State Young Birders Club (NYSYBC) Report. She reported that NYSYBC marked its second anniversary this fall. There are currently 22 youth members, 20 supporting adults, and 17 partner clubs. In addition to Carena, five adults are doing communications, administrative, publicity, and coordination work. More chaperones for field trips are needed throughout the state to attend one or two local trips each year; Carena asked that volunteers contact her. The students competed in the World Series of Birding as the "Razorbills" and did well raising money for the new Education Fund, which also benefited from contributions sent in by several NYSOA member clubs. A new scholarship program was established and a total of \$1870

was awarded to six young birders to help fund birding camps, pelagic trips, and other educational programs. Carena asked NYSOA member clubs who are not NYSYBC partners to join and show their support. Individuals can also join as Supporting Adult members.

Shai Mitra gave *The Kingbird* Report. The publication schedule is back on track. Shai asked members to please send him articles.

Tim Baird gave the *New York Birders* Report. Tim reminded members that the newsletter is the birders' publication. He would like contributions—poetry, prose, observations, etc. from members. The newsletter also highlights field trips from around the state and summarizes board meetings. Tim will soon be retiring from editing *New York Birders* and is actively looking for a replacement.

Gerry Smith reported that 15% of Onondaga Audubon members choose to receive an electronic version of their newsletter, and wondered if NYSOA had considered this option. He also mentioned that a Kingston, ON bird club sends an email announcement to members when their publication is ready for a download (no paper copies sent). Tim also reported that the *Checklist of the Birds of New York State* was updated with the latest AOU and NYSARC changes. There are 476 species listed with notations for NYSARC species. The booklet is \$2 or you can purchase 10 booklets for \$15.

Carena Pooth gave the Website and Information Services Report. Carena implemented the searchable online archive of The Kingbird. The work included installation and configuration of the search engine needed to perform the indexing of the individual article files. The searchable data base went live in January 2010; it includes all articles published from 1950 through 2007. Four issues of The Kingbird will be added to the archive each year. In December 2009, Carena also implemented online purchase capability (using PayPal) for NYSOA and NYSYBC memberships (new/renew/gift) as well as checklist and decal purchases. Eighty-seven memberships (26 new) came through PayPal. PayPal charges 2.2% on each purchase plus a flat 30 cent charge per transaction. Carena also enabled Google Analytics which provides statistical analysis of website usage. During the past six months, 50% of traffic to the NYSOA website came from search engines and 20% came from links on other websites. 24% of page hits were for the NYSOA home page, 20% were for the NYSARC section, 4% were for the Kingbird archive, and 3% were for the Member Clubs page.

Bob Spahn gave the eBird Report. There was some discussion regarding the need for the separate NY eBird webpage and whether it was worth the trouble to update that page. Bob explained that the regional data published in *The Kingbird* are not in a database, whereas eBird serves as a database and could serve that function for NYSOA. Bob will encourage clubs to get members to enter their data in eBird first and then paste the eBird report of their sightings into postings to their local listsery rather than to just publish a note on the listsery without entering the data into eBird.

Gerry Smith recommended that clubs publish directions for their members on how to use eBird. Bob also told the group that there are various filters that flag records as "exceptional," giving the observer a chance to decide whether the entry may be an error. Such records are then reviewed by a screener. In NY, the screener is often the local *Kingbird* Regional Editor. Questionable records are not added to the public database until they are validated by a screener, although they remain a part of the observer's database.

Shai Mitra gave the New York State Avian Records Committee (NYSARC) Report. The 2009 NYSARC Report will be in the December 2010 or March 2011 issue of *The Kingbird*. The 2008 Report is in the September 2010 issue. In the future, each December issue will contain the previous year's NYSARC report.

Jeremy Kirchman gave the Research Committee Report. Jeremy wrote an article clarifying the laws on salvaging dead birds, which will appear in the December 2010 issue of *The Kingbird*. The Ornithological Council is lobbying to have the Migratory Bird Treaty Act of 1918 amended to allow individuals to salvage dead birds and offer them to a person holding a salvage permit. Jeremy also reported that Ewald and Sherony's monograph on the Hamlin Beach Lakewatch is now available on the NYSOA website.

Gail Kirch gave the Awards Report. Gail reported that awards would be given out at the banquet. Four Lillian C. Stoner Awards were given this year. She reminded members that NYSOA offers Member Club grants of up to \$100 for special projects. This year, Bedford Audubon received \$75. This organization runs the Chestnut Ridge Hawk Watch in Bedford, NY. In an effort to increase awareness and appreciation of raptors, they give free workshops on raptor identification. To further their goal, the requested money will be used to purchase copies of Paul Carrier's *A Guide for Hawks Seen in the Northeast* for distribution to workshop participants.

Bob Spahn gave the Bylaws Report. Proposals to change or update the bylaws will be discussed at the next board meeting. Some of the possible changes include term limits for Officers and changing the number of Directors.

Tim Baird gave the Nominating Committee Report. Tim reported that the committee used geographic considerations to make sure that Officers and Directors came from all parts of NYS. He also explained that the Officer positions are one-year terms and that the President and Vice-President have a term limit of two consecutive 1-year terms. Director position terms are two years and there is a term limit of two consecutive 2-year terms. Tim nominated the following 2010-2011 slate of Officers/Directors for election:

Carena Pooth – President
Gail Kirch – Vice President
Andy Mason – Treasurer
Michael DeSha – Corresponding Secretary
Joan Collins – Recording Secretary

Victor Lamoureux – Director (2012) Shai Mitra – Director (2012) Bob Spahn – Director (2012) Kathy Schneider made a motion to have the Secretary cast a ballot to elect the slate of Officers and Directors. Jeremy Kirchman seconded the motion, and it was unanimously approved.

Carena Pooth announced the following names for election to the 2010-2011 Auditing Committee: John Cairns, Irving Cantor, and Peter Capainolo. John Confer made a motion to elect the Auditing Committee. Gerry Smith seconded the motion, and it was unanimously approved.

Carena Pooth announced the following names for election to the 2010-2011 Nominating Committee: Valerie Freer (Chair), Jerry Lazarczyk, and Berna Lincoln. Andy Mason made a motion to elect the Nominating Committee. Gail Kirch seconded the motion, and it was unanimously approved.

#### **Old Business**

None.

#### **New Business**

Carena Pooth announced that the Ralph T. Waterman Bird Club will host the 2011 Annual Meeting. It will be held on 24 September 2011 in Dutchess County. She encouraged member clubs to plan ahead and volunteer now to host a future meeting.

Andy Mason led the discussion of the Lead Ammunition Resolution that he had presented for adoption. He gave some background on the problems with using lead ammunition. Two years ago, at a conference of the Peregrine Fund, it was shown that lead ammunition has a detrimental effect on birds and other wildlife. The NYS pathologist documented 300 cases of lead poisoning in birds (Common Loons, Bald Eagles, Osprey, etc.) over 20 years. These were cases where the bird was obtained by the DEC and autopsied, so it is only the tip of the iceberg. The NYSOA resolution was written to ask the DEC and state to take action. The EPA was going to act, but did not have jurisdiction in the states. NYSOA feels that the DEC should do more to educate people about alternatives to lead ammunition. After some discussion among members, the phrase "after a reasonable period of time" was removed from the last paragraph. Andy Mason made a motion to approve the Lead Ammunition Resolution as amended. Kathy Schneider seconded the motion and it was unanimously approved.

Gerry Smith introduced a new resolution to call attention to the fact that staff loss at the DEC is impacting the ability of the department to get its job done and to condemn the firing of the DEC Commissioner. Gerry Smith moved to approve the resolution. Bard Prentiss seconded the motion. More discussion ensued with some who felt that the resolution should focus on budget issues only. Gerry withdrew the resolution as currently written.

Andy Mason made a motion to adjourn the meeting. Jeremy Kirchman seconded the motion and it was unanimously approved at 12:04 p.m.

#### Awards

The following awards were given out during the Saturday evening banquet: Lillian C. Stoner Award:

Hope Batcheller – nominated by the Hudson-Mohawk Bird Club and NYSYBC Jacob Drucker – nominated by the Linnaean Society of NY Carolyn Sedgwick – nominated by the Cayuga Bird Club Benjamin Van Doren – nominated by the NYSYBC

#### John J. Elliott Award:

For the best *Kingbird* article of the year: Shai Mitra for "Regular inshore occurrence of non-breeding Arctic Terns (*Sterna paradisaea*) during summer on Long Island, New York", *The Kingbird*, Vol. 59, No. 1, March 2009.

#### Gordon M. Meade Distinguished Service Award:

The award goes to Tim Baird for his many years of outstanding dedication to NYSOA in serving as a Director, Vice-President, President, Corresponding Secretary, and Editor of New York Birders.

Respectfully submitted,

Joan Collins Recording Secretary

#### HIGHLIGHTS OF THE SEASON—SPRING 2011

#### S. S. Mitra

Biology Department, The College of Staten Island 2800 Victory Boulevard, Staten Island, NY 10314 shaibal.mitra@csi.cuny.edu

#### THE WEATHER

Spring 2011 was exceptionally wet. April was particularly wet, with damaging floods reported over much of northern New York. Poor weather impeded landbird migration for extended periods, but a break in the weather toward the end of the April was accompanied by a huge push of migrants.

#### WATERFOWL AND WATERBIRDS

When bird populations grow and their distributions expand, things change fast in the birding world. The rapidity with which our conventional wisdom can be revolutionized is illustrated superbly by this spring's waterfowl migration in New York State. "Richardson's" Cackling Goose was barely known among New York birders until a few pioneering students began working them out in the late 1990s; this spring about 100 were recorded across the state. Greater Whitefronted Goose was barely accepted as a naturally occurring species in New York prior to the 1970s; this spring the state hosted groups of 12, seven, and four in Regions 9, 1, and 10. New York's first Ross's Goose wasn't found until 1983, and as recently as 1998 the total number known to have occurred statewide was about a dozen; this spring at least 20 were widely distributed across the state, and nine were tallied at one site near Pine Island, Region 9. Until just five years ago, all Barnacle Geese were considered suspect in New York, regardless of date, context, and appearance; now they are expected every year and have fallen awkwardly low on the list of worrisome/exciting species that trouble the sleep of New York's competetive year-listers. Amazingly, Black-bellied Whistling-Duck also seems to be following these trajectories, at least in terms of accelerating occurrence, if not in terms of geographical origins. Region 9 scored all five of these species during spring 2011, due in great part to Rob Stone's efforts, beginning with the discovery of some of the arctic-breeding geese in early March and concluding almost three months later with a flock of five striking whistling-ducks. Mike Bochnik's Region 9 report is well worth close reading in this regard.

At least 17 Eurasian Wigeon were recorded, distributed across all Regions except 4 and 6, and at least five "Eurasian" Green-winged Teal were tallied in Regions 3 and 10. These robust totals may be related to the major incursions of

these taxa that were detected in Atlantic Canada during the winter of 2010-11 (e.g., 40+ wigeon in Nova Scotia and 35 teal near St. John's, Newfoundland; *North American Birds* 65: 234). Predictably, careful observers also detected hybrids or intergrades of these taxa with their closest North American relatives, American Wigeon and Green-winged Teal. Less expected were reports of hybrids such as Snow Goose x Canada Goose (Regions 2 and 3), Blue-winged Teal x Northern Shoveler (Region 3; see article this issue), Ring-necked Duck x scaup (Region 3), and **Tufted Duck** x scaup (Region 10).

An adult **White Ibis** that visited Staten Island from 25 April into May was on the vanguard of a major incursion that unfolded during the summer. Equally remarkable were no fewer than four **White-faced Ibises**, all upstate, including the first ever for Region 2.

#### **RAPTORS**

Eastern New York shared in this spring's northward push of Swallow-tailed Kites, with reports from Regions 8, 9, and 10. Mississippi Kites were recorded in Regions 2, 8, and 9. An exceptional total of five Swainson's Hawks was recorded this spring (Regions 2, 3, and 5), of which three occurred with a warm front along the Lake Ontario shore 27-28 April. This same front yielded New York's greatest single-day flight of Broad-winged Hawks on 27 April, with **39,417** passing Braddock Bay.

#### SHOREBIRDS, GULLS, TERNS, AND ALCIDS

Four reports each of American Golden-Plover and "Western" Willet from upstate were more than usual for spring. Even more remarkable was a Piping Plover at Sandy Pond, *Oswego*, Region 5 from 10-21 May, which represented the first local record since 1984. Also unusual as to date and place was a Laughing Gull at Fair Haven, *Wayne*, Region 5 on 27 May.

Other rare gulls reported from the Great Lakes Plain this spring included **Slaty-back-backed**, **California**, and **Thayer's**. In this regard, the gull-watching exploits of Willie D'Anna, Jim Pawlicki, and Dave Tetlow deserve commendation. A count of 13 Lesser Black-backed Gulls at Riga, *Monroe*, Region 2 on 22 Mar was notable for upstate New York and suggestive of how early adults of this rapidly increasing species pass northward in our region. Consistent with this observation, four well-watched winter-resident adults on Long Island departed 10-25 March. Another wave of Lesser Black-backs surged up the coast two months later, when as many as 15 immatures were recorded in southwestern *Suffolk*, Region 10 in mid May.

**Arctic Terns** were reported by careful observers at sea near Block Canyon 21 May and during a shore-based seawatch on Long Island 22 May. These reports are very credible, but I think it is worth emphasizing that photographic documentation is almost wholly lacking for these contexts in New York, and

that every effort should be made to photograph ocean-going migrants of this difficult to identify species.

Through repeated trips offshore and assiduous seawatching from eastern Long Island, Angus Wilson recorded five of New York's six regularly occurring alcids this spring. The missing species was Thick-billed Murre, which, despite historical periods of more regular occurrence, has proven frustratingly difficult to find in recent years—especially offshore.

#### **LANDBIRDS**

Redpolls were abundant and widespread statewide. Among the many flocks, Hoary Redpolls were more widespread than ever, and careful attention to detail yielded a well-documented report of the nominate subspecies *hornemanni*, historically poorly known in the state, from Region 2. Similarly, keen observers discerned "Greater" Common Redpolls in Regions 2, 6, and 7. Both of these taxa breed in Greenland and were reported widely in eastern Canada and the northeastern United States this past winter; it is hoped that evidence documenting the New York reports will be sent to NYSARC, where it can be reviewed and archived.

As far as breeding landbirds were concerned, most of the news seemed to be bad for species garnering special concern in recent years, such as Northern Bobwhite, Chuck-will's-widow, Red-headed Woodpecker, Sedge Wren, and Henslow's Sparrow. There were, of course, predictable exceptions to this trend. Clay-colored Sparrow was recorded in Regions 2, 5, 6, 7, 9, 10, and many of the southeastern-breeding Neotropicals made good showings.

A major wave of landbirds pushed through the state in association with a warm front 26-27 April. Even apart from this event, however, the trend toward earlier spring arrival dates couldn't be ignored this year. The accompanying date tables show, for instance, that each of 22 common and widespread warbler species arrived earlier than its 25-year average. The flipside of this precession was that migration appeared to many observers to have essentially ended by mid-May, formerly the time when the greatest flights were expected. In this regard, some very robust mid-May counts by Jay McGowan in the Ithaca, Region 3 area were heartening: 85 Tennessee and 17 Blackburnian Warblers must have been quite a pleasure to eyes and ears!

#### **BIRD OF THE SEASON**

My choice for this spring's Bird of the Season is the group of nine Ross's Geese that visited Pine Island, *Orange*, Region 9 in early March. Not only was this one of the largest counts recorded to date in the state, but the group also included an example of the species' very rare dark morph (see photo, page 244). Furthermore, accompanying these birds were a Barnacle Goose, three "Richardson's" Cackling Geese, and 12 Greater White-fronted Geese! Finally,

all of these birds persisted long enough to allow many observers to study and enjoy them.

#### **SPRING ARRIVAL DATES FOR 2011**

Region	Species Reported <sup>1</sup>	Seasonality <sup>2</sup> vs. 1987-11	Advance <sup>3</sup> (Days)	Record Early Spp.
1	91	-1.49	-1.67	10
2	93	-2.69	-3.93	4
3	90	-1.97	-2.83	5
4	84	-3.75	0.87	4
5	92	-3.06	-2.04	9
6	90	-4.13	4.12	12
7	90	0.03	9.28	1
8	88	-2.44	1.10	3
9	79	-0.56	-0.70	5
10	87	-1.50	-4.20	4

<sup>&</sup>lt;sup>1</sup>Maximum number of species = 93.

Given difficulties in estimating arrivals of some species in some Regions, estimates of Seasonality and Advance should be interpreted with caution.

<sup>&</sup>lt;sup>2</sup>Average arrival in a Region compared to that Region's 25-year average.

<sup>&</sup>lt;sup>3</sup>Average arrival in a Region compared to the average of all Regions.

Spring Arrival Dates 2011 Waterbirds

#### REGION 1—NIAGARA FRONTIER

#### Mike Morgante

6405 Woodberry Court, East Amherst, NY 14051 morgm@roadrunner.com

The weather in March was an extension of the colder than usual winter months. and it was the coldest March in eight years. The mean temperature at the Buffalo weather station was 31.9° F, 2.4° below average. There was 4.63" of precipitation, 1.64" above average, much of which fell in rainfalls on the 5<sup>th</sup> and 10<sup>th</sup>. Snowfall was 13.3", 0.9" above average. Buffalo Harbor remained filled with ice through March and wasn't clear of ice until 19 April. The April weather that followed was the third wettest in 141 years. The mean temperature was 45.7° F, 0.4° above average, and featured a cold first week while reaching the 80s during the fourth week. A strong push of songbirds, including numerous early arrivals, occurred 26-28 April during the warm stretch that often featured southerly winds. Precipitation was 5.69", 2.65" above average, and snowfall was 1.0", 2.6" below normal. Winds gusted above 60 mph on the 28th bringing widespread tree damage, especially in Niagara County where gusts exceeded 80 mph! The wet and gloomy weather continued in May. The average temperature was 58.7° F, 1.7° above normal. It was the wettest May and spring season on record. Rainfall was 8.09", 4.54" below normal. The frequent rain was a likely factor in the good numbers of migrant songbirds observed in May.

There seemed to be a typical spring Canada Goose migration, with the peak during mid-March. Tundra Swan migration was evident during the first two weeks of March. Snow Geese were more plentiful than usual, especially following a few days with easterly winds. The maximum Snow Goose count was 238 at Alabama on 13 March. A Ross's Goose was observed by many in early March at Dunkirk Harbor. Three reports of Greater White-fronted Geese, with a maximum of seven, is becoming the new normal. Cackling Geese were again reported in some higher numbers, with a maximum of 37 at Hartland on 12 March. Rounding out the less common goose species was a lone Brant much earlier than usual on 2-3 April.

Typical of recent springs, there were several **Eurasian Wigeons** reported, with most sightings in the vicinity of Iroquois NWR. There was also at least one **Eurasian x American Wigeon** hybrid there. Willie D'Anna had an impressive count of 2,050 Northern Pintails at a large field in Hartland on 11 March. New bike/walking trails along the Buffalo Outer Harbor have provided easier access to view waterfowl. Jim Pawlicki found three **King Eiders** there on 17 March among a few thousand diving ducks. Many birders were able to find them, although often not present, through at least 27 April. Willie D'Anna found another at Wilson Harbor on 21 April. Two **Harlequin Ducks** at Dunkirk Harbor delighted birders through 12 March, while one in the Niagara River gorge was present 12-20 May, later than usual. There were fewer scoters reported on Lake Ontario than usual. However, all three species were reported from Batavia WWTP this spring, where irregular inland. Red-necked Grebes

were scarce, with only a few reported. An **Eared Grebe** continued from winter at Dunkirk Harbor and another was found on Lake Ontario in mid-April.

Three **Snowy Egrets** were found, with the third earliest on record found at Tifft Nature Preserve by Chris Newton on 11 April and two at Tonawanda WMA on 26 April. A **Cattle Egret** in Hartland was a nice find on 30 May. The rarest wader of the season was an adult **Yellow-crowned Night-Heron** found among Black-crowneds at Tifft Nature Preserve by Alec Humann on 26 April.

Four reports (five total birds) of **Black Vulture** continue the upswing of sightings in recent years. Broad-winged Hawk migrants peaked during the unseasonably warm weather 26-27 April. Willie D'Anna found a rare **Swainson's Hawk** among broad-wings over Wilson on the 27<sup>th</sup>. The other rare raptor for the season was a **dark morph Red-tailed Hawk** in Gaines originally found by Dave Tetlow on 1 April which was later observed by several birders.

**Sandhill Cranes** were well reported even away from the hawkwatches. **King Rail** was heard but not seen on at least two occasions along Feeder Road on Tonawanda WMA in May. This was the same location where reported last year.

Shorebirds were conspicuously scarce in the third week of May, when they are often most prevalent. The top shorebird locations this spring were the mucklands in Elba and Kumph Marsh at Iroquois NWR, but even they were hit or miss. Kurt Fox had good numbers of shorebirds at Elba in late April and early May, including two, separate **Wilson's Phalaropes**. Other uncommon species sightings included two **Purple Sandpipers** and a flock of **Whimbrels** off Niagara Falls SP. **Upland Sandpipers** were reported from two recent breeding locations.

Two **Black-headed Gulls**, with a large group of Bonaparte's Gulls on the Niagara River in Buffalo, were a nice find by Jim Pawlicki on 22 April. One at Dunkirk Harbor in early March was observed by many birders. Pawlicki carefully counted 48 Little Gulls on the Niagara River at Lewiston on 16 March, 46 of which he noted were adults. A **Slaty-backed Gull** was found by Willie D'Anna in Porter on 16 March. Chris Newton found one on 22 March in Wilson that was likely the same bird. It is possible that these sightings are from the same bird observed at Lewiston Reservoir in February.

Long-eared Owl calls heard at Iroquois NWR multiple times in May were likely from a breeder, while one sighted at Tifft Nature Preserve 1 May could have been a late migrant. A Northern Saw-whet Owl found at Tifft on 13 May is more questionable as a late migrant and perhaps was a local breeder. There were several Short-eared Owls throughout the Region in March and April. One in Shelby through at least 22 May was more indicative of a possible breeder. There was only one double digit report of Common Nighthawks, with Marty Sanden counting 22 on 26 May. The only Eastern Whip-poor-will report was from Fort Niagara SP on 19 May.

Migrant songbirds were especially plentiful through much of May at classic migrant spots like Tifft Nature Preserve, Forest Lawn Cemetery in Buffalo, and parks along Lake Ontario. Birders were also happy to report many migrants inland as well. There were only two Golden-winged Warbler reports,

oddly no "Brewster's" Warbler reports, and one "Lawrence's" Warbler, found by Art Buddington on 5 May at Tifft Nature Preserve. A migrant Yellow-throated Warbler was found by Jim Pawlicki at Point Gratiot on 17 Apr, while one at Allegany SP in May was at a recent breeding location. Migrant Prothonotary Warblers were at Amherst SP 30 Apr and Carlton 1 May plus 1-2 at the recent breeding location at Tonawanda WMA. Four Yellow-breasted Chats were more than in recent springs and included one long-staying bird at Wilson-Tuscarora SP.

Common Redpolls were widespread until the first week of April, and there were some lingering reports until 3 May. Hoary Redpolls were documented from four locations, with multiple sightings at each location. While it was an excellent 'winter' season for redpolls, the increase in Hoary reports is likely influenced by birder effort in sorting through the Common Redpolls and advances in identification. Pine Siskins were present in low numbers and usually not lingering long in any one location. There was one report of Evening Grosbeaks in Allegany County, where they occur most frequently in the Region.

The B.O.S. April Count was held on 10 April. Light easterly winds gave way to gusty southwest winds associated with a warm front during the afternoon. A total of 147 species were tallied over the entire Region 1 and the portion of the B.O.S. Study Area in Ontario. There were seven record high counts since the 1935 inception including: Mute Swan (37), Eurasian Wigeon (2), Turkey Vulture (4607), Cooper's Hawk (73), Golden Eagle (2), Glaucous Gull (6), and Northern Cardinal (1197), plus the first ever occurrence of **Bohemian Waxwing**.

The full report for the B.O.S. May Count on 15 May was not received in time for inclusion in this report.

HW 27 Apr (JiL, WW); 2 NF 5 May (WD); increasing.

**Turkey Vulture:** max 1843, 2224 Ripley HW 8, 9 Apr.

#### **HAWKS - ALCIDS**

Osprey: arr ChauL 22 Mar (JB); 22 Hamburg HW 9 Apr; pair nesting on platform at Tifft NP. Bald Eagle: too numerous to report all nesting locations; 10 INWR 24 Mar (JP); 8 imm, 1 ad Allegheny Res CATT 26 Mar (TB); 34 BOSAC; 10 Hamburg HW 26 Apr; max 17 Wilson & Porter NIAG 27 Apr (WD, BP).

**Sharp-shinned Hawk:** max 84, 417 Ripley HW 9, 10 Apr; 240 Hamburg HW 26 Apr.

N. Goshawk: Wilson NIAG 2, 17 Apr (WD, PY); Alden ERIE 27 Apr (JM); only reports away from hawkwatches.

**Red-shouldered Hawk:** arr 3 Orchard Park ERIE 8 Mar; max 206, 74 Ripley HW 17, 18 Mar.

Broad-winged Hawk: arr Ripley HW 9 Apr; max 5854 Ripley HW, 2250 Hamburg HW 26 Apr; 2250 Wilson NIAG 27 Apr (WD). SWAINSON'S HAWK: Wilson NIAG 27 Apr (WD! NYSARC), rare.

Red-tailed Hawk (DARK MORPH): Gaines ORLE 1-3 Apr (DT, WD, JP), very rare. Rough-legged Hawk: 17 Ripley HW 17 Mar; max 23 Hamburg HW 9 Apr; last BOSMC. Golden Eagle: arr Tifft NP 15 Mar (CN); Hamburg HW 9 Apr (JP); 2 ORLE BOSAC; Shadigee ORLE 23 Apr (WD); 2 Wilson NIAG 27 Apr (WD).

Merlin: 12 reports away from hawk watches; 6 BOSAC; pair Salamanca CATT 25 Apr (TB); last WTSP 20 May.

**Peregrine Falcon:** arr Somerset NIAG 5 Mar; 3 Tifft NP 15 Mar; 3 Ripley HW 26 Apr; numerous reports from nesting locations and elsewhere.

**KING RAIL:** TWMA 13, 22 May (KF), heard only; not documented.

Virginia Rail: arr INWR 21 Apr.

Sora: arr Conewango CATT 6 Apr (PM), slightly early; Porter NIAG 27 Apr; 3 Tifft NP 8 May; Kiantone CHAU 7 May; 2 BWWTP 20 May; Alexander GENE 26, 30 May.

**Com. Moorhen:** arr INWR 18 Apr; dead Derby ERIE 20 Apr.

**Am.** Coot: arr ChauL 12 Mar; max 69 INWR 5 May.

Sandhill Crane: arr Tillman Rd WMA ERIE 13 Mar (RS); migrants reported from eight other locations away from hawk watches.

**Black-bellied Plover:** arr 2 Wilson NIAG 17, 20 May (DM), only report.

Semipalmated Plover: arr 1 Elba GENE 1 May; ties Reg record early; 7 Elba GENE 11 May; max 11 Hartland NIAG 19 May.

**Spotted Sandpiper:** arr Bethany GENE 12 Apr. **Solitary Sandpiper:** arr 2 Kiantone CHAU 24 Apr; max 9 Elba GENE 1 May; last Lancaster ERIE 24 May.

Greater Yellowlegs: arr ChauL 19 Mar (JB); 35 INWR 18 Apr; max 38, 30 Elba GENE 27 Apr, 7 May.

Lesser Yellowlegs: arr 9 BOSAC; max 138, 137, 125 Elba GENE 27 Apr, 1, 7 May (KF). Upland Sandpiper: arr 1, 3 Tillman Rd. WMA ERIE 6, 30 May (BC, PY); Colden ERIE 12 May (JiL); only reports.

**Whimbrel:** 15 NFSP 24 May (JB), distant view, likely correct ID.

**Ruddy Turnstone:** arr NFSP 20 May (MM); 2 BWWTP 27 May (GL).

**Sanderling:** arr PB **13 May** (KF), Reg record early, only report.

**Semipalmated Sandpiper:** arr Hartland NIAG 26 May.

**Least Sandpiper:** arr Carroll CHAU 1 May. **White-rumped Sandpiper:** no reports.

**Pectoral Sandpiper:** arr INWR 6 Apr; max 24 INWR 14 Apr.

**Purple Sandpiper:** 2, 1 NFSP 12, 25 May (MM, PY), traditional location for spring reports.

**Dunlin:** arr 5 BOSAC; 17, 24 Elba GENE 30 Apr, 1 May; max 25 INWR 7 May.

**Short-billed Dowitcher:** 23 Hartland NIAG 18 May (WD), only report.

Wilson's Snipe: arr Portland CHAU 21 Mar; max 30 Pomfret CHAU 25 Mar (TM).

Am. Woodcock: arr Alden 6 Mar.

**Wilson's Phalarope:** 1, 1 Elba GENE 1, 7 May (KF), different birds.

Bonaparte's Gull: 6 ChauL 20 Mar; Bethany GENE 4 Apr; 5 Shelby ORLE 11 Apr; max 5500, 3000 Buffalo NR 15, 30 Apr (JP, PH); 16 BWWTP 16 Apr; 12 Dayton CATT 24 Apr; 40 FNSP, 40 WTSP 25 May (PY).

**BLACK-HEADED GULL (R1):** DH 1-4 Mar (JP); 2 Buffalo NR 22 Apr (JP! mob), on the late side.

Little Gull: 3 DH 1-7 Mar; max 48 Lewiston NR 16 Mar (JP), 46 of these ad; BeSP 15 Apr; 3 Buffalo NR 22 Apr; Tonawanda NR 28 Apr. Iceland Gull: max 5, 5 Porter NIAG 16, 20 Mar; last DH 25 Apr.

**Lesser Black-backed Gull:** INWR 19 Mar (JP), unusual inland; ad Hamburg HW 21 Mar (WW, JP); max 5 DH 28 Apr.

SLATY-BACKED GULL: Porter NIAG 16 Mar (WD!, BP, NYSARC); Wilson NIAG 22 Mar (JP! NYSARC); same bird suspected, also possibly same bird seen in Feb.

The Kingbird 2011 September; 61 (3)

**Glaucous Gull:** max 6 Lewiston Res NIAG 20 Mar; last Hamburg ERIE 22 Apr.

Caspian Tern: arr FNSP 4 Apr; 100 DH 12 Apr; max 220 Wilson NIAG 1 May (CM); 128 PB 1 May.

Black Tern: arr 12 INWR 26 Apr; 1, 1, 1 BWWTP 30 Apr, 20, 26 May; Lewiston NR 1 May; max 47 INWR 5 May (WW).

Com. Tern: arr Lewiston NR 4 Apr (JP), Reg record early; 1, 1, 3 BWWTP 9 Apr, 26, 27 May; 2 Dayton CATT 24 Apr; 101 Wilson NIAG 1 May; max 350 Buffalo Harbor ERIE 4 May (WW).

Forster's Tern: arr BWWTP 9, 10 Apr (JH, DB, KF); Buffalo NR 11 Apr (JP); 1, 1 BWWTP 3, 26 May (CN, JM).

#### **PIGEONS - WOODPECKERS**

Yellow-billed Cuckoo: arr Hinsdale CATT, Watts Flats WMA CHAU 14 May. Black-billed Cuckoo: arr Tifft NP 14 May. Long-eared Owl: NIAG BOSAC; Tifft NP 1 May (CN); INWR 13, 22 May (KF); BOSMC; rarely reported beyond Apr.

Short-eared Owl: BWWTP 9 Mar (KF); Oakfield GENE 13 Mar; 1, 1 Tifft NP 15 Mar, 26 Apr; BOSAC; LBSP 17 Apr; Shelby ORLE 21 Apr-22 May (CM, KF), date suggestive of breeding.

N. Saw-whet Owl: WTSP 3-22 Mar (BP); 2 WTSP 4, 5 Apr (BP); Tifft NP 13 May (J&KL); only reports.

Com. Nighthawk: arr 1, 1, 1 Alfred ALLE 2, 6, 22 May (RP); Buffalo ERIE 13, 30 May; 7 LBSP 19 May; Tonawanda ERIE 22, 28 May; 4 Portland CHAU 22 May; PG 27 May; max 22 Dunkirk CHAU 26 May (MS); NF 29 May. E. Whip-poor-will: FNSP 19 May (LL), only report.

**Chimney Swift:** arr Hamburg HW 25 Apr. **Ruby-throated Hummingbird:** arr Orchard Park ERIE 30 Apr.

**Red-headed Woodpecker:** ALLE BOSAC; Colden ERIE 30 Apr – 4 May; reported from seven known or likely breeding locations in May.

**Red-bellied Woodpecker:** Alfred ALLE 29 Mar (EB), rare in higher terrain of ALLE.

**Yellow-bellied Sapsucker:** arr 2 Williamsville ERIE, 3 BeSP 4 Apr.

#### **FLYCATCHERS - WAXWINGS**

Olive-sided Flycatcher: arr Buffalo ERIE 18 May (RS); SPNS 19 May (LH); WTSP 22 May (WD, BP).

E. Wood-Pewee: arr Tifft NP 11 May.

Yellow-bellied Flycatcher: arr Buffalo ERIE 22 May; max 12 Wilson & Porter NIAG 27 May (WD, BP), impressive count; five other reports in late May.

**Acadian Flycatcher:** arr INWR 19 May; Carroll CHAU 30 May.

**Alder Flycatcher:** arr Watts Flats WMA CHAU 14 May.

**Willow Flycatcher:** arr Carroll CHAU 9 May, ties Reg record early.

Least Flycatcher: arr Tifft NP 26 Apr. E. Phoebe: arr Randolph CATT 20 Mar. Gr. Crested Flycatcher: arr Tifft NP 26 Apr. E. Kingbird: arr Tifft NP, 2 Eden ERIE, 5 TWMA 26 Apr.

**N. Shrike:** six reports in Mar; last Carlton ORLE 1 Apr.

Yellow-throated Vireo: arr OOWMA 30 Apr. Blue-headed Vireo: arr SPNS BOSAC 10 Apr, ties Reg record early.

Warbling Vireo: arr multiple locations 27 Apr. Philadelphia Vireo: arr Buffalo ERIE 12 May. Red-eyed Vireo: arr Wilson NIAG 1 May.

Com. Raven: 3 Glenwood ERIE 22 Mar; N Java WYOM 27 Mar; Tonawanda NR 30 Mar, 21, 22 Apr (JP); 2 Hamburg HW 9 Apr (JP); DLSP 21 Apr (JM); 3 E. Concord ERIE 22 Apr; Basom GENE 3 May (CM); Eden ERIE 4 May; Sardinia ERIE 20 May; only reports outside ALLE,

CATT, CHAU besides BOS counts; cont to incr. **Purple Martin:** arr 12 BOSAC.

**Tree Swallow:** arr 2 INWR 18 Mar; 900 Elba GENE 26 Apr (KF); max 1125 BWWTP 4 May (KF), cold, windy day.

N. Rough-winged Swallow: arr TWMA 9 Apr. Bank Swallow: arr Tifft NP 20 Apr; max 225 BWWTP 4 May (KF).

**Cliff Swallow:** arr Alexander GENE, Buffalo Harbor ERIE 27 Apr.

**Barn Swallow:** arr 2 Alexander GENE 5 Apr. **House Wren:** arr Bethany GENE, Tonawanda ERIE 25 Apr.

Winter Wren: arr 3 Tifft NP 7 Apr. SEDGE WREN (R1): arr INWR 22 May (KF). Marsh Wren: arr Tifft NP 22 Apr (JM, JP); AmSP 27 Apr (RS).

**Golden-crowned Kinglet:** arr 10 Williamsville ERIE 4 Apr.

**Ruby-crowned Kinglet**: arr Williamsville ERIE 4 Apr.

**Blue-gray Gnatcatcher**: arr 2 Tifft NP 23 Apr. **Veery:** arr BeSP 2 May.

**Gray-cheeked Thrush**: arr Buffalo ERIE 12 May; BOSMC; three other reports.

Swainson's Thrush: arr Bethany GENE, Buffalo ERIE 5 May; max 12 Tifft NP 22 May (MM)

Hermit Thrush: arr Buffalo ERIE 8 Apr.

**Wood Thrush:** arr BeSP, INWR 27 Apr. **Gray Catbird:** SPNS 12 Mar; Tifft NP 15 Mar; arr multiple locations 26 Apr.

N. Mockingbird: S. Buffalo ERIE 8 Mar; 1, 2 Alexander GENE 30 Mar, 27 Apr; Hamburg HW 25 Apr; Grand I ERIE 10 May; less common in these areas.

Brown Thrasher: arr 2 BOSAC.

BOHEMIAN WAXWING (R1): Bethany GENE BOSAC 10 Apr (DB!), very late, with group of Cedars; latest spring record for Reg. Am. Pipit: arr 3 Batavia, Alexander GENE 8 Mar; last Wilson NIAG 20 May.

#### LONGSPURS - WARBLERS

Lapland Longspur: 2 Alabama GENE 3 Mar; 20 Oakfield GENE 19 Mar; 30 Shelby ORLE 24 Mar (JM, JP); max 40 Carlton ORLE 1 Apr (DT); 24 Tillman Road WMA 3 Apr; last 12 Shelby ORLE 20 Apr.

**Snow Bunting:** 80 Alabama GENE 3 Mar; 40 BeSP 6 Mar; 150 Bethany GENE 7 Mar; max 1100 Hartland NIAG 11 Mar (BP, WD).

**Blue-winged Warbler:** arr 2 Alden ERIE, 2 Lewiston NIAG 27 Apr (NY, NS).

Golden-winged Warbler: arr Buffalo ERIE 12 May (PY, RS); Wilson NIAG 27 May (BP, WD); only reports.

"Brewster's" Warbler: no reports.
"Lawrence's" Warbler: Tifft NP 5, 7 May
(AB, CN, CHo), rare.

**Tennessee Warbler:** arr Wilson NIAG 6 May; max 17 Buffalo ERIE 19 May (RS).

Orange-crowned Warbler: arr Tifft NP 6 May (DS); 1, 1 Buffalo ERIE 8, 19 May; FNSP 11 May; 1, 1 Wilson NIAG 13, 16 May; 2 FMCSP 14 May.

**Nashville Warbler**: arr TWMA, Alden ERIE 26 Apr

**N. Parula**: arr Tifft NP 27 Apr; max 8 Wilson NIAG 14 May (BP, WD); seemingly more common in migration this year.

**Yellow Warbler**: arr 2 SPNS, Sandusky CATT 24 Apr.

Chestnut-sided Warbler: arr BeSP 30 Apr. Magnolia Warbler: arr Tifft NP 27 Apr. Cape May Warbler: arr Wilson NIAG 1 May; max 4 Wilson NIAG 14 May.

**Black-throated Blue Warbler:** arr Tifft NP **27 Apr** (MG, GR, DS), Reg record early.

Yellow-rumped Warbler: Alexander GENE 16 Mar: arr 15 BOSAC.

**Black-throated Green Warbler**: arr Williamsville ERIE 11 Apr (RS!), early; Tifft NP 21 Apr.

**Blackburnian Warbler**: arr Wilson NIAG 26 Apr (BP), slightly early.

YELLOW-THROATED WARBLER (R1):

PG 17 Apr (JP); AlSP 10 May (TB), recent breeding location.

**Pine Warbler:** arr Colden ERIE 4 Apr (CN); max 9 Tifft NP 16 Apr (RS).

Prairie Warbler: arr Buffalo ERIE 7 May (DG); Carroll CHAU 29 May, breeder. Palm Warbler: arr 2 AmSP, Sandusky CATT

24 Apr; last Tifft NP 22 May.

**Bay-breasted Warbler**: arr Tifft NP 8 May; max 20 Wilson & Porter NIAG 22 May (BP, WD).

**Blackpoll Warbler**: arr Tifft NP 10 May. **Cerulean Warbler**: arr BeSP 5 May; Sherman CHAU 7 May; 3 AlSP 28 May.

**Black-and-white Warbler**: arr multiple locations 26 Apr.

**Am. Redstart**: arr BeSP 27 Apr (JP), ties Reg record early.

**Prothonotary Warbler:** arr AmSP 30 Apr (GR!); Carlton ORLE 1 May (KF); TWMA 7, 20 May, regular breeding location.

Ovenbird: arr multiple locations 26 Apr. N. Waterthrush: arr 2 Tifft NP, INWR 26 Apr. Louisiana Waterthrush: arr Tifft NP 11 Apr (KF), rare in migration.

Mourning Warbler: arr Tifft NP 12 May. C. Yellowthroat: arr Eden, Alden ERIE 27 Apr. Hooded Warbler: arr Colden ERIE 26 Apr. Wilson's Warbler: arr Tifft NP 2 May (CN), Reg record early; max 20 Wilson & Porter NIAG 27 May (WD, BP).

Canada Warbler: arr 5 Watts Flats WMA CHAU 7 May (JB); max 15. Wilson & Porter NIAG 27 May (WD, BP). Yellow-breasted Chat: arr Alden ERIE 9-15 May (CW); INWR 13, 22, 29 May (KF, JeL); WTSP 14-31 May (BP, WD, mob); Clymer CHAU 20 May (ST); increase over recent

springs.

#### **TOWHEES - WEAVERS**

E. Towhee: arr Alden ERIE 18 Mar (NY). Am. Tree Sparrow: 6 Alexander GENE 28 Apr; last GHSP BOSMC (HS).

**Chipping Sparrow:** arr 2 Belfast ALLE 1 Apr. **Clay-colored Sparrow:** no reports.

**Field Sparrow**: arr Pomfret CHAU 23 Mar; 4 Belfast ALLE 2 Apr.

**Vesper Sparrow**: arr 6 BOSAC; Shelby ORLE 24 Apr; BuSP 30 Apr; 2 Carlton ORLE 1 May; 2 BOSMC.

**Savannah Sparrow:** arr Barre ORLE 3 Apr. **Grasshopper Sparrow:** arr Times Beach NP ERIE 30 Apr (MM), rarely sighted in migration; 2, 4 Tillman Rd WMA ERIE 12, 30 May (NY,

PY); 2 Middlebury WYOM 14 May; Carlton Hill MUA WYOM 14 May; DLSP 20 May; 2 Artpark NIAG 20 May; Conewango CATT 28 May; 2 Pomfret CHAU 29 May; more reports than usual.

Fox Sparrow: arr Ashford CATT 7 Mar; max 17, 15 Tifft NP 11, 20 Apr (WW, RS); last Clymer CHAU 7 May.

**Lincoln's Sparrow**: arr Tifft NP 26 Apr (AH); max 5 Buffalo ERIE 12 May; 4 Tifft NP 22 May; last WTSP, FMCSP 27 May.

**Swamp Sparrow:** BWWTP 13 Mar; 2 INWR 20 Mar; either wintering or early spring arrivals. **White-throated Sparrow:** max 91 Tifft NP 1 May (RS).

White-crowned Sparrow: arr Tifft NP 11 Apr; max 46 Tifft NP 11 May.

**Scarlet Tanager:** arr Tifft NP 27 Apr, ties Reg record early.

**Rose-breasted Grosbeak**: arr multiple locations 26 Apr.

**Indigo Bunting**: arr Wilson NIAG 27 Apr (WD, BP), slightly early.

**Bobolink**: arr DLSP 29 Apr; 4 Knox Farm SP ERIE 30 Apr.

**E. Meadowlark:** arr Hamburg HW, Randolph CATT 12 Mar.

**Rusty Blackbird:** arr 2 Portland CHAU 6 Mar; 50 Barre ORLE 24 Mar; 19 Poland CHAU 27 Mar; 35 Alabama GENE 29 Mar; est 3500 INWR, 2500 TWMA 26 Apr (KF), near dusk; last 8 BOSMC.

Orchard Oriole: arr Knox Farm SP ERIE 30 Apr (CC); 1, 4 Portland CHAU 1, 17 May (CHa); BesP 6 May; LBSP 7 May; Buffalo ERIE 8-12 May; Wilson NIAG 15, 19 May; Ransomville NIAG 20 May.

**Baltimore Oriole**: arr 3 Colden ERIE, Alden ERIE 27 Apr.

**Purple Finch:** slightly lower than normal numbers.

Com. Redpoll: 50, 60 Youngstown NIAG 5 Mar, 5 Apr; 70, 50 Orchard Park ERIE 19 Mar, 2 Apr; 70, 1 Wilson NIAG 19 Mar, 1 May; Grand I ERIE 1 May; last Alfred ALLE 3 May; well reported through first week of Apr.

HOARY REDPOLL (R1): 1f, 2m Wilson NIAG 11, 17 Mar (WD, BP); Colden ERIE 11 Mar (CN); 1, 1, 1 Youngstown NIAG 14, 16, 20 Mar (LL, TY); 1, 1 Orchard Park ERIE 26, 31 Mar (MM); more documented reports than usual. Pine Siskin: 25 FNSP 4 Mar; max 60 Wilson NIAG 6 May; present in low numbers Mar through mid-May.

**Evening Grosbeak:** 18 ALLE BOSAC; 8 ALLE BOSMC, only reports.

#### **REGION 2 – GENESEE**

#### Robert Spahn

716 High Tower Way, Webster, NY 14580 rspahn@prodigy.net

Weather is often a major influence in determining the picture of a season, especially a migration season like spring. This year the weather factor was particularly strong and obvious, though much of the impact was due to weather far removed from our Region and even our State. For much of April and May, a mass of storms set up over the south-central portion of the country—from Texas to the Carolinas and the Gulf Coast states to above the Ohio Valley. Severe storms and heavy rains essentially blocked the path for trans-gulf and Central American migrants moving toward the Northeast. Brief breaks in this pattern sent strong fronts sweeping rapidly northeast, producing a few bursts of sometimes strange mixes of regular migrants plus some interesting rarities. But for much of the time the migration season was SLOW and THIN.

Focusing on the local weather, March was changeable as usual, but still largely a continuation of winter. Most statistics were average, but the ground remained snow-covered and most of the bays and ponds were mostly frozen for much of the month. Temperatures averaged 33.8° F, 0.1° below normal, precipitation totaled 2.67", 0.09" above normal, and 15.1" of snow fell, bringing the total for the winter to 127.0". Sunshine was well above normal at 54%, but persistent northerly winds most of the month meant little migration, especially for hawks. Early April brought some sign of a warm up and the beginning of migration, but then the second half turned very wet, with rain on 10 of the last 15 days. The highlight was a weather break on the 26<sup>th</sup> and 27<sup>th</sup>, with strong winds bringing the best ever single day hawk flight to Braddock Bay, plus a burst of migrants and rarities. The temperature for the month averaged 46.4°, 1.1° above normal, and precipitation totaled 5.81", 3.06" above normal, a record high for the month. Rain and clouds continued to rule the picture through May. Temperatures see-sawed, and after nine dry days from the 4<sup>th</sup>-12<sup>th</sup> which brought in migrants, the next nine days were wet. Hot, humid days and storms ensued, followed by a nice Memorial Day weekend. Temperatures averaged 58.8°, 1.8° above normal, and precipitation totaled 4.80", 1.98" above normal, capping the second wettest spring on record here.

Moving on to the groups of migrants we follow in spring, first a look at the waterbirds. Typical of recent years, waterfowl moved in relatively early and moved through quickly. Ice cover on the lakeshore ponds and bays limited the build-up of numbers to well below expectations. Few birds lingered there even into April. The only high counts near or on Lake Ontario were of some of the scaup, scoters, Long-tailed Duck, and Red-breasted namely, Merganser—and even these were low. Among the puddle ducks, all of the high counts were from the Northern Montezuma Wetlands Complex, mainly in March. Along the lakeshore, monitoring of the lakewatch at Hamlin Beach SP 230 The Kingbird 2011 September; 61 (3) was irregular, and there were very few days with any significant movements noted. Even Canada Goose numbers in fields near the lakeshore were low. The numbers of Snow Geese in this Region near the Montezuma NWR were unusually poor, probably due to ice on the ponds and snow cover during the time of their peak passage. In contrast, Dave Tetlow tallied over 30,000 Snow Geese in the Genesee Valley southwest of Rochester on 11 March, a record count for that area. Historically the bulk of the Snow Goose movement through the Region is to the east of Rochester. Among the rarer waterfowl were a Greater White-fronted Goose, three Ross's Geese, 2-3 Eurasian Wigeons, Harlequin Duck, and Barrow's Goldeneye. Noting some trends, we find 33+ Cackling Geese over all three months; Trumpeter Swan breeding in Wayne County, with a maximum of 21 in Savannah; and Mute Swan all over near the Lake Ontario shore ponds.

Among the other waterbirds, after low numbers this winter, we had a late 1 March arrival date for Common Loon and low maxima for both loons. Reasonable, but not really high, peak counts were noted for Horned and Rednecked Grebes on 8 April, and an **Eared Grebe** was found at Hamlin Beach SP on 7 May. Two American White Pelicans visited the Braddock Bay area on 11-12 April, then two were seen in Savannah on 5 May—the same birds? 1290 Double-crested Cormorants passing Hamlin Beach on 7 April was the best high count, and an adult **Great Cormorant** flyby near Braddock Bay seen by Brad Carlson was a real surprise. The warm pulse in late April pushed in a **Tricolored Heron** and a Snowy Egret. Then on 18-20 May the Region's first **White-faced Ibis** was found and photographed by Bruce Cady and subsequently by many others in the High Acres Landfill mitigation area in Perinton. Finally, on 30 May a **Cattle Egret** dropped in near the Braddock Bay hawkwatch platform. Interestingly, there were several other Western NY sightings of Cattle Egret at this time.

This year the official Braddock Bay Hawkwatch counter was Luke Tiller, with prior experience at the Greenwich, CT fall watch. By mid April he must have wondered why he came. March was generally cold and rainy or snowy, with winds wrong even well into April. 9-11 April finally brought a burst of hawks, peaking at 8870 on 11 April, but then it was back to more rain. Then, 27 April brought the biggest single day count at Braddock Bay, with 42,235 birds; 39,417 of these were Broad-winged Hawks. May reverted back to poor winds and rain, with no 1000-bird days until 21 May, but 23 May brought another 11,350 Broadwings, an adult Mississippi Kite passed on 28 May, 94 Bald Eagles were tallied on 29 May, and the season ended with the second highest all-time count at 107,219. Maybe Luke will be back! To put things into perspective, even with this high total, only the 24,619 Turkey Vultures and 413 Bald Eagles were record high species totals and only the one-day Bald Eagle and Broad-winged Hawk counts were records. All other record highs are found well in the past. Other raptors of note include 11 Black Vultures through the season and a single Swainson's Hawk at the watch, but another nearby the next day. Luke also paid attention to the other birds in the area as hawk numbers allowed.

Rail reporting is always iffy. **King Rail** is a rarity in the Region and Beechwoods SP (the old Camp Beechwoods Girl Scout camp and Maxwell Creek area west of Sodus Point in Wayne County) was a surprise location for one found by Doug Daniels. Many Sandhill Cranes passed, with a peak of 13 on the record early arrival date of 17 March, also arriving at the Carncross Road breeding area in Savannah on that same date. Over the season, there were at least 72 Sandhill Cranes tallied in the Region.

The shorebird picture this season was crazy and hard to assess. The bottom line was terrible numbers, but essentially all expected species and several rarities were reported. High lake levels limited the lakeshore habitat and eliminated several places on creeks, ponds, and bays that often would normally have mudflats. The rains provided many areas with puddles in the farm fields, but some have now been tilled or can be pumped out to drain quickly. In other cases, during prime shorebird migration time, flooded fields in our Region were visited but simply held few or no birds. The late season period, when birds are often found at Ontario Beach or on the nearby piers at the mouth of the Genesee River, or seen passing the lakewatch, was not productive. The piers and beaches at the outlet of Sodus Bay to Lake Ontario were only slightly better. In spite of the negatives on habitats and numbers, early shorebirds were found at normal dates and Solitary Sandpiper arrived record early. Am. Golden-Plover, relatively rare in spring, was found in April and May. "Western" Willet, Marbled Godwit, three reports of Sanderling, and two White-rumped Sandpipers all were reported in May, and Wilson's Phalarope in late April. Yet there were no reports of good numbers of Semipalmated Sandpiper after a very late 23 May arrival and there were few reports of Short-billed Dowitcher.

Gull and tern reports were also on the low end this season. The best location for interesting gulls was in the area around a large landfill in the Town of Riga in western Monroe County and into nearby Genesee County. Dave Tetlow surveyed these birds most actively and turned up **California Gull** on 24 March, Herring x Lesser Black-backed Gull in March and May, Thayer's Gull in March and April, and a maximum of 13 Lesser Black-backed Gulls on 22 March. In addition, the saga of rooftop-nesting Ring-billed Gulls in Batavia opened a new chapter, with their return reported by Kurt Fox on 19 March. Efforts continue to discourage the colony. Tern arrival dates were on the early average end, except for Black Tern. In all cases there were no really good counts other than 128 Caspian Terns at Point Breeze.

Among the non-passerine landbirds, we start with Eurasian Collared-Dove in March and May at the usual Parma and Hamlin sites, but with only singles reported on scattered dates. There were only two sightings of Snowy Owl reported, on 5 and 30 March, both at Braddock Bay. There were good numbers of No. Saw-whet Owl over an extended period in the usual area on the west side of Manitou Beach Road, but few Long-eared Owls. Jim Adams recorded the GPS coordinates of all locations he was aware of and has prepared a map and summary report. Among the woodpeckers, the continuing highlight was the **Lewis's Woodpecker** in the Town of Richmond, Ontario County. It continued through 9 April and in the last month or so was more widely publicized and so

was seen by many more observers. The big push on 27 April brought the Region's fifth **Chuck-will's Widow** and four Whip-poor-wills found by Dave Tetlow in the hawk banding area west of Manitou Beach Road. Whip-poor-will continued in the area at least through May. Dave also had an excellent peak count of 112 Common Nighthawks there on 23 May.

The passerine picture was another wild and messy one. Clearly, reduced numbers for many species have led to patchy or spotty migration in recent years. This year this trend was enhanced by weather effects. We do have some tools for trying to analyze the information or at least to try to make sense of observations. These include the daily banding numbers from Braddock Bay Bird Observatory's (BBBO) Kaiser-Manitou passerine banding station; a Migration Stopover Project with sets of point counts in progress; 25 years of Spring Arrival Dates tabulated for 66 landbird species (plus 27 waterbirds); and now thousands of eBird records. Using these, we find the best banding days—27 April and 13-14 and 22-28 May—correspond with some of the best periods generally for good numbers and rarer records. The weather-related backups of migrants to the south and subsequent bursts of migration corresponded closely with many arrivals and records of rarer birds during several discrete periods: 23 and 27-30 April and 7, 22-23, and 25-30 May. In early May there were several days on which observers commented on the great numbers of migrants. However, this typically involved big numbers of one or a few species and was spotty; if you were in the right woodlot at the right time, GREAT, but miss that time by minutes or miss the place and you'd be asking, WHERE ARE THE BIRDS? As an example, I personally experienced this on 24 May when I heard 20+ Blackpoll Warblers singing in every tree all along Edgemere Drive, then turned inland to see how many there were in the woods near the hawkwatch, but within 0.2 miles heard no song. Heading back toward the lake and turning into the Braddock Bay marina (0.2 mile off the lakeshore), within 100 yards Blackpoll song was everywhere and a walk on the East Spit produced many more. A strange feature in early May was the simultaneous arrival or presence of big numbers of some species at normal dates, but with normally much later migrants mixed in, e.g., Willow Flycatcher, Gray-cheeked Thrush, Blackpoll Warbler, and Mourning Warbler at very early dates.

To many, spring arrivals seemed early. It takes a look at the date tables and maybe some study to put this into perspective. First, the overall average arrival this spring was only 0.06 of a day later than last year, when the foliage, crops, etc. were weeks ahead of this year. Next, the big push from the southwest over 26-28 April was accompanied by a large number of arrivals and record early dates for Blue-winged Warbler, "Brewster's" Warbler, and Cerulean Warbler and ties of early records for Warbling Vireo, Yellow Warbler, and Scarlet Tanager. Of the 66 landbirds in the Spring Arrival Date table, 49 were at dates earlier than the average over the 25 years we have been keeping the table, but only one species was statistically significantly early (>2 standard deviations). Also of interest, looking at the later-than-average birds, seven had average dates after 6 May (and only Willow Flycatcher was early among all the set of birds normally arriving later than that date) and six had normal average arrival dates

in the 1-4 April period. The exceptions were House Wren with 12 April and Swainson's Thrush with 4 May as normal arrival dates, and Eastern Bluebird, for which overwintering individuals make choosing the "arrival" date problematic.

Scanning the passerine families, we find five Olive-sided Flycatcher records, a good number for recent years, but many of the other flycatchers noted in low average numbers, especially the later arrivals. A couple of White-eyed Vireos, one banded, in late May is typical, though often they appear earlier. The Fish Crows of winter along the Genesee River continued to be reported, mostly in the same corridor, in numbers up to ten through the season. Clearly, breeding is suspected and hopefully will be confirmed. Peak counts for all of the swallow species in the Region were dismally low this spring. Counts of migrant Blue Jay and American Crow never reached their usual highs. Among the thrushes, banding totals for Veery and Gray-cheeked Thrush (including Gray-cheeked/Bicknell's) were particularly low and no Bicknell's was banded. Swainson's and Hermit Thrush banding totals were at least decent. The peak count for Am. Robin at 30,000 was very high but well below the record high of 86,600 of 1 April 2008.

Among the warblers, 34 species were reported this spring, with 22 of these plus "Brewster's" hybrid arriving in April. The flood of migrants in late April, when the weather broke, brought two reports of Worm-eating Warbler, and in May rarer species were added with three reports of Prothonotary Warbler and two of Connecticut Warbler. In the case of Prothonotary Warbler, 2-3 birds moved into the Armitage Road area on the Wayne/Seneca County line border between Regions 2 and 3. This is an area where they have nested successfully in the past but not for several years. Looking to other species of special interest, five Golden-winged Warblers were reported in April and May; at least 19 Orange-crowned Warblers were reported in May, six of these banded; and two Yellow-breasted Chats were reported late in May. Species commented upon as especially numerous at times included Yellow Warbler, Magnolia Warbler, American Redstart, Common Yellowthroat, and Wilson's Warbler. On the lower than expected side were Tennessee, Yellow-rumped, Black-throated Green, Blackburnian, Palm, and Bay-breasted Warblers, and Ovenbird.

There was little of note among the sparrows. Peak counts for most of the migrants were low and arrival and departure dates typical. Highlights were five Clay-colored Sparrow reports and a maximum count of 15 Grasshopper Sparrows in the Nations Road area between Avon and Geneseo. Additional rarities included a female Summer Tanager on 13 May and a flyby Dickcissel on 20 May. Blackbird counts were decent but not particularly noteworthy, other than 1840, 4365, and 1760 Rusty Blackbirds tallied by Dave Tetlow on the West Spit of Braddock Bay on 11, 27, and 28 April, respectively. Both Orchard and Baltimore Orioles appeared with the rush in late April and continued in good numbers. Finch highlights included a good count of 416 Purple Finch passing Braddock Bay on 11 April; a White-winged Crossbill on 7 May; holdover records of redpolls including 1 "Greater" on 9 March; a maximum of 375 Common on 10 March; 13+ Hoary in March, with a maximum of six on 10

March, and single Hoary on 4 and 10 April; and single Evening Grosbeaks on 11 March and 10 April and two on 1 May.

Species counts for the season were 139 vs. a 10-year average of 132.8 for March, 217 vs. 185.6 for April, and 243 vs. 228.7 for May. The strange weather certainly appears to have aided in sending a diverse array of birds to this Region.

**Pine Siskin:** max 145 BB – West Spit 28 Apr (DT).

**Am. Goldfinch:** max 818 HB 7 May (JeB, CWo, AGu).

**Evening Grosbeak:** 1 M 111 Mar (KG); 1 M 10 Apr (BCL, DD); 2 Hogan Pt G 1 May (DT).

===

# **REGION 3 - FINGER LAKES**

# Hope Batcheller

250 Rabbit College Rd, Petersburgh NY 12138 hjb58@cornell.edu

Spring 2011 was quite wet, with precipitation levels in March and April both higher than average. March's precipitation was 125% of normal, much of which fell as snow. This contributed to the fairly late snowmelt; many areas had snow cover until late March. April received 10 inches of precipitation, 200% of normal. May had close to average precipitation levels. Except for a cold spell in late March, temperatures were near average.

Migration brought a fairly standard waterfowl mixture to the Region. David Wheeler reported a **Greater White-fronted Goose** at Knox-Marcellus Marsh on 16 March, and mid-March's large Snow Goose movement came with scattered reports of **Ross's Geese**. **Cackling Geese** were reported mixed with Canada Goose flocks throughout the season. As in the past few years, **Eurasian Wigeon** was reported in the Montezuma area in late March and early April.

In addition to these reports of truly countable waterfowl species, several other interesting ducks were also seen. Jay McGowan found a "Eurasian" Green-winged Teal (Anas crecca crecca) at George Rd. Pond in Dryden on 17 March and later a "Common" Teal x Green-winged Teal intergrade in the same place on 30 March. Chris Wood found a second intergrade at Montezuma NWR on 9 May. A male hybrid scaup sp. x Ring-necked Duck was found at Stewart Park on 12 March and stayed in the area through 3 April. Finally, Chris Wood photographed a hybrid Blue-winged Teal x Northern Shoveler at the Montezuma NWR Visitor Center on 9 May (see pp. 206-207 & 242).

An **Eared Grebe** overwintered on Cayuga Lake for the twelfth winter in a row and was last reported on 12 March. Joe and Carol Slattery found two **American White Pelicans** at East Road at Montezuma on 7 May, which continued through 8 May. Particularly rare in the spring, a **Little Blue Heron** visited Sapsucker Woods on 5 May.

—continued p. 245

# PHOTO GALLERY Spring 2011

Figure 1. Spruce Grouse, Parishville, St. Lawrence, 28 May 2011, © Melissa Burchard.

Figure 2. Fox Sparrow, Central Park, *New York*, 13 May 2010, © Lloyd Spitalnik. Stephen Chang presents a case that this bird is an example of the western North American "Sooty" Fox Sparrow (subspecies group *unalaschensis*) in this issue, pp. 203-205.

Figure 3. Blue-winged Teal x Northern Shoveler hybrid, Montezuma NWR, *Seneca*, 19 May 2011, © C. L. Wood. The Blue-winged Teal influences are best appreciated when the bird is head-on. In addition to the obvious white crescent on the face (narrower than in Blue-winged), note the pale brown breast with fine spotting. The head appeared glossy green, similar in color to Northern Shoveler. See pp. 206-207.

Figure 4. Details same as in Fig. 3. Note the extensive cinnamon sides similar to a Northern Shoveler but with small black spotting. The color is richest in the center and paler on top and near the rump. The extensive green in the secondaries and blue upperwing coverts bordered by a bold white bar are very similar to the upperwing of a Northern Shoveler, as is the bold white underwing. The tail appears similar to that of a Blue-winged Teal. Also note the brownish breast with fine black spotting, white neckring, and white facial crescent.

Figure 5. Blue-winged Teal x Northern Shoveler hybrid, Prospect Park, *Kings*, 22 Jan 2010, © Rob Jett. Note that this bird also shows a green head and finer markings on the breast than one would expect in Australian Shoveler. See pp. 206-207.

Figure 6. Glaucous Gull, pelagic out of Freeport, Nassau, 27 Mar 2011, © Peter Post.

Figure 7. Dark morph Ross's Goose, Pine Island, *Orange*, 5 Mar 11, © Curt McDermott. The dark morph of Ross's Goose is much rarer than that of Snow Goose ("Blue" Goose). This bird was part of an exceptional aggregation of rare waterfowl described in detail in Mike Bochnik's Region 9 report, pp. 274-279.

Two **White-faced Ibis** at Stewart Park on 7 May provided a first Tompkins County record for this species. Originally found by Tim Lenz, these breeding-plumaged birds were later viewed and photographed by many others. David Wheeler photographed another **White-faced Ibis** along the Montezuma NWR Wildlife Drive on 16 May.

This spring brought several interesting shorebird sightings to our Region. Dave Nutter found a **Willet** of the western subspecies (*Tringa semipalmata inornata*) at Myers Point on 28 April, and Tim Lenz found one at the Treman Marina on 3 May. Greg Lawrence and John Bateman reported a **Marbled Godwit** at Montezuma NWR on 21 May, which many observers saw and photographed on 23 May. Montezuma NWR also hosted a group of nine **Whimbrel** on 27 May. Fairly rare in the spring, **American Golden-Plovers** were reported from Montezuma on 21 April and 30 May. Also rare in the spring, David Wheeler found a **Red-necked Phalarope** at Montezuma on 18 May.

It was an excellent spring for **Red-headed Woodpecker** sightings, with one at Treman State Marine Park on 5 May, a second in Freeville on 20 May, and a pair in Aurora 21-26 May. **White-eyed Vireos** were also easier to come by than normal. Bob McGuire found one in Lansing on 26 April, Chris Tessaglia-Hymes found one at the Hawthorn Orchard on 30 April, and Jay McGowan found one along Dodge Rd. in Ithaca on 2 May. Finally, Chris Wood found a **Sedge Wren** in Dryden on 22 May, which continued until the following morning.

Warbler migration was slow until late April, but a warm spell with light southerly winds on 26 April brought a large wave of migrants into the area. Ithaca's Hawthorn Orchard proved particularly birdy this spring, with 24 warbler species reported including high counts for several species. Highlights there include **Golden-winged Warbler** on 19 May, a "cacophony" of 85 **Tennessee Warblers** on 17 May, 17 **Blackburnian Warblers** on 17 May, 13 **Bay-breasted** and 60 **Blackpoll Warblers** on 21 May, and six **Canada Warblers** on 17 May.

As usual, there were scattered reports of the less common warblers as well. Ken Rosenberg had a **Yellow-throated Warbler** near the Ithaca Airport on 8 May, and **Prothonotary Warblers** again returned to breed in the Montezuma area. **Worm-eating Warbler** also continued to breed at Lindsay-Parsons Biodiversity Preserve, as in the past several years.

A **Harris's Sparrow** that had overwintered at a feeder in Dryden was last reported on 5 May. Finally, several birders saw a **Yellow-headed Blackbird** at Montezuma NWR's Tschache Pool on 30 May, a particularly rare record for the spring.

A total of 254 species was reported this spring.

**Ruddy Turnstone:** 4 MyPt 27 May; 2 MyPt 29 May; max 20 MNWR 30 May.

White-rumped Sandpiper: arr SavM 30 Apr (HB, JM, BM), early; max 10 MNWR 26 May. Red-necked Phalarope: MNWR 18 May (DW), unusual in spring.

**Bonaparte's Gull:** arr StP 4 Apr; max 147 MyPt (CW).

Herring Gull: max 6000 MNWR 25 Mar (JM). Iceland Gull: last MNWR 25 Mar.

Lesser Black-backed Gull: max 4 MNWR 25 Mar (JM); last Cayuga L CAYU 23 Apr. Glaucous Gull: last StP 6 Apr (TL).

**Great Black-backed Gull:** max 70 MNWR 25 Mar.

Black Tern: max 10 MNWR 7 May.

#### **PIGEONS - WOODPECKERS**

**BARN OWL:** Danby TOMP 29 Apr (BE), recorded in flight.

Short-eared Owl: max 3 Ovid SENE 12 Mar. N. Saw-whet Owl: TOMP 8 May (SK); HaOr 19 May (GC, CTH).

**RED-HEADED WOODPECKER:** Hog Hole TOMP 5 May (CW); Freeville TOMP 20 May (CW); pr Aurora CAYU 21-26 May (mob).

#### **FLYCATCHERS - WAXWINGS**

**Acadian Flycatcher:** arr Fort Hill TOMP 22 May; LPBP 25, 29 May.

**WHITE-EYED VIREO:** Lansing TOMP 26 Apr (BM); HaOr 30 Apr (CTH); Dodge Rd. TOMP 2 May (JM).

**SEDGE WREN:** Dryden TOMP 22-23 May (CW, JB, JM).

**Gray-cheeked Thrush:** arr SaW 17 May. **Hermit Thrush:** max 12 SaW 23 Apr.

#### LONGSPURS - WARBLERS

**Lapland Longspur:** last 17 East Rd SENE 10 Apr.

**Golden-winged Warbler:** arr HaOr 11 May (CTH); last HaOr 19 May (JM).

**Tennessee Warbler:** max 85 HaOr 17 May (JM), high count.

**Orange-crowned Warbler:** arr Etna TOMP 29 Apr; Dodge Rd TOMP 2 May; last SaW 16 May. **Nashville Warbler:** arr StP 20 Apr (JM), ties Reg record early.

**Chestnut-sided Warbler:** arr Cornell U 26 Apr (AJ), ties Reg record early.

Cape May Warbler: arr SaW 27 Apr (MC), Reg record early; max 5 Ithaca TOMP 6 May. Yellow-rumped Warbler: max 120 HowI 30 Apr.

**Blackburnian Warbler:** arr Lansing **25 Apr** (BH), Reg record early; max 17 HaOR 17 May (JM).

**YELLOW-THROATED WARBLER:** Lansing 8 May (KR).

**Pine Warbler:** max 11 MRun 15 May. **Prairie Warbler:** arr Lansing TOMP 26 Apr; max 12 LPBP 14 May.

**Bay-breasted Warbler:** max 13 HaOr 21 May (JM, HB).

**Blackpoll Warbler:** max 60 HaOr 21 May (JM, HB).

**Cerulean Warbler:** arr HowI 30 Apr; max 12 HowI 10 May.

**Am. Redstart:** max 28 MRun 14 May. **Prothonotary Warbler:** MNWR 6 May (JB, CW); MWC 30-31 May (mob).

Worm-eating Warbler: LBPB 25 May (JM). Com. Yellowthroat: max 21 MNWR 14 May. Hooded Warbler: arr Phelps ONTA 29 Apr. Wilson's Warbler: max 4 SaW 20 May. Canada Warbler: max 6 HaOr 17 May (JM).

#### **TOWHEES - WEAVERS**

Grasshopper Sparrow: arr SFair 19 Apr. HARRIS'S SPARROW: last Dryden TOMP 5 May (JM), overwintering bird. Bobolink: max 50 SFair 10 May.

YELLOW-HEADED BLACKBIRD: MNWR 30 May (TL, SH, JM, KR).

Rusty Blackbird: max 130 SaW 23 Apr.

Orchard Oriole: arr MyPt 28 Apr. Red Crossbill: MRun 11 Apr (CW, JB), flyover.

Com. Redpoll: last TOMP 1 May, late.

# **REGION 4—SUSQUEHANNA**

# Matthew A. Young

Cornell Lab of Ornithology 159 Sapsucker Woods Road, Ithaca, NY 14850 may6@cornell.edu

March was snowy across the Region and April was one of the wettest on record. Overall, the spring period was exceptionally wet, breaking records at many reporting stations. Temperatures were normal to slightly above normal. Due to very poor back-to-back cone crop years and the very wet spring, the cone crop in Central New York was assessed as excellent for the upcoming year. I rated it as the best Central NY cone crop since 2000. White ash, beech, and other deciduous tree species appear to be producing bumper crops as well.

The first goose flights occurred as usual during early March, and ducks followed on subsequent warm fronts. The spring hawk watches east of Otsego Lake yielded much lower numbers this year than last year. Some thought the low numbers were because of wet, unseasonable weather dispersing the birds across a wider area. Returning breeding **Merlins** were noted in some small cities and villages but were also missing from a few reliable areas where they've been reported in recent years; again, this might have been because of the wet spring. Waders and marsh birds were very well represented: Common Moorhen, Upland Sandpiper, Great Egret, **Cattle Egret**, American Bittern, and Least Bittern. Perhaps the two best birds for the Region this spring were the **Eared Grebe** seen by Chris Wood at Whitney Point Reservoir and a presumed **White Ibis** seen in a field in Cortland by Pam Stark. A NYSARC report has apparently been submitted for the ibis and, if accepted, would likely be a County first.

Common Raven continues to increase as a breeder throughout the area. A pair nested again this year at Lime Hollow Nature Center less than half a mile from the city limits of Cortland; 3-4 young were banded. Swainson's Thrushes were heard on nesting grounds in late May in the Pharsalia area. Other than in Delaware County along the edges of the Catskills, the Pharsalia area is the only place in Region 4 where Swainson's Thrush can be found nesting. Many typically more northern breeding warblers can also be heard regularly in the Pharsalia area, along with Northern Goshawk, Red-shouldered Hawk, Broadwinged Hawk, Common Raven, both crossbills, Pine Siskin, and other northern specialties such as White-throated Sparrow. Type 1 Red Crossbills were heard singing at a few Chenango County locations in late June.

This year, migration seemed sluggish, with some species seeming to be late, but then the floodgates opened and an interesting mix of late and early migrants were seen on the same day on 26 April. Between 25-28 April, record early dates were reported for Northern Parula, Cape May Warbler, Ovenbird, and Indigo Bunting. **Yellow-throated Warbler** was seen again at Chenango Valley SP, but it didn't seem to stick around this year. **Cerulean Warblers** were again observed on territory at the south end of Skaneateles Lake. Three of the best songbird finds for the spring were **Kentucky Warbler**, **Prothonotary Warbler** 

(Wildwood Nature Preserve), and Orchard Oriole.

It was a big redpoll year, with several area feeders reporting 100+ Common Redpolls. As is typical with large redpoll invasions, a few scattered **Hoary Redpolls** and "**Greater**" Common Redpolls were noted mixed in the flocks. Redpolls seemed to linger well into April. There was a noticeable return flight of Pine Siskins across the area in April into mid May. It was a decent Evening Grosbeak year, with a few small flocks of 5-50 lingering into mid April at high elevation areas in Chenango and Cortland counties.

#### WHISTLING-DUCKS - VULTURES

Snow Goose: sev flocks early Mar.

**Brant:** "loose V" Chenango Valley 25 Apr; 2 WPR May 21.

Wood Duck: a few overwintered River Rd Endwell and elsewhere; arr BPd and Tioga Airport 12 Mar; max 25 River Rd Endwell 19 Mar.

Gadwall: arr Hillcrest Pits 3 Mar.

Am. Wigeon: few overwintered; arr 3 Bpd 12 Mar; max 20 Chenango bridge 13 Mar; 2 LHNC 5 May.

**Am. Black Duck:** dozens of reports; numerous until early April; 1 BPd and Brick Pond Trails TIOG into May.

**Blue-winged Teal:** arr River Rd Endwell 19 Mar; pair BPd late Apr.

N. Shoveler: arr Rte 12a and Chenango Bridge 13 Mar.

N. Pintail: arr 1 BROO 5 Mar; max 20 TIOG 7 Mar.

**Green-winged Teal:** arr BROO 6 Mar; max 31 CHEN 27 Mar; several reports.

Canvasback: no reports.

**Redhead:** rep Hillcrest Pits & BPd Mar. **Ring-necked Duck:** arr 2 Bing 5 Mar; max 45

BPd 2 Apr; last end of Apr.

**Greater Scaup:** BROO 26 Apr; only report, late.

Lesser Scaup: arr BROO 20 Mar; few reports. Long-tailed Duck: 2 Otsego Lake 16 Apr. WHITE-WINGED-SCOTER (R4): one

Quaker Lake 20 Apr (AL).

**Bufflehead:** sev reports, no big numbers. **Com. Goldeneye:** few reports.

**Hooded Merganser:** many reports; breeding at many beaver ponds scattered thru Region.

**Com. Merganser:** max 20 BPd 13 Mar; breeding along rivers and larger ponds/lakes.

Red-breasted Merganser: 10 WPR 6 Apr.

Ruddy Duck: 4 TIOG 21 Mar. Com. Loon: 12 WPR 6 Apr.

**Pied-billed Grebe:** pair breeding BPd; 6 reports. **Horned Grebe:** arr Chenango Bridge 13 Mar; max 32 WPR 6 Apr.

Red-necked Grebe: BROO 17 Apr.

EARED GREBE (R4): WPR 6 Apr (CW).

Double-crested Cormorant: arr BROO Mar 21;
max WPR 6 Apr; sev May reports; breeding in area yet?

**Am. Bittern:** arr 2 LHNC 22 Apr; BUNP 28 Apr.

**LEAST BITTERN (R4):** BUNP 28 Apr (DH). Great Egret: a few reports; unusual in Reg 4 in Spring, but becoming more common.

**CATTLE EGRET (R4):** Murphy's Gravel Pit 16 May (mob).

Green Heron: arr BROO 26 Apr.

**WHITE IBIS:** Cort 11 May (PS, NYSARC), likely 1st CORT record if accepted by NYSARC.

Turkey Vulture: many reports.

#### **HAWKS - ALCIDS**

**Osprey:** arr West River Rd CORT 5 Mar (JB); very early report for upstate.

**Bald Eagle:** much fewer migrating eagles at hawkwatch sites east of Otsego Lake Mar; nesting numbers stable or still increasing along SusqR, TioR, and other areas.

N. Harrier: 9 reports.

**Sharp-shinned Hawk:** appears stable, but hard to find due to nesting in remote forested areas. **Cooper's Hawk:** becoming a common

city/village nester.

N. Goshawk: pr nesting Heiberg SUNY-ESF Forest CORT Apr; pr North Rd Phar Mar. Red-shouldered Hawk: arr BROO, OSTE, CORT, CHEN 10-25 Mar; sev prs thru Reg, well established in state lands in sev counties.

**Broad-winged Hawk:** arr BROO 17 Apr; also well established in many state forests throughout Region.

**Rough-legged Hawk:** few rep; last Marathon 2 Apr.

**Golden Eagle:** much fewer migrating eagles at hawkwatch sites east of Otsego Lake Mar.

**Am. Kestrel:** few wintering; influx end Mar; still fairly well established as a breeder despite lower wintering numbers.

**Merlin:** usual prs not seen Binghamton, & Cooperstown Apr; pr Cortland; other sightings away from cities.

**Peregrine Falcon:** breeding pr Binghamton Mar

**Virginia Rail:** arr BROO 17 Apr. **Sora:** arr Bpd 1 May, early.

COMMON MOORHEN (R4): LHNC 29 May (WG)

Am. Coot: Brick Pond Trail thru May.

**Semipalmated Plover:** arr & max 10 Murphy's 16 May.

Killdeer: arr beginning Mar.

Spotted Sandpiper: arr WPR 10 Apr.

Solitary Sandpiper: arr BROO 23 Apr; max 11

Murphy's 16 May; 10+ rep.

**Greater Yellowlegs:** arr Bpd Anson Rd/TIOG airport 4 Apr; 7 rep.

**Lesser Yellowlegs:** arr BROO 23 Apr; max 4 Murphy's 16 May; 10 rep.

**Least Sandpiper:** arr BROO 3 May; max 30 Murphy's 16 May; sev other rep.

UPLAND SANPIPER (R4): OTSE 7 May

Semipalmated Sandpiper: arr BROO 5 May; max 8 WPR 27 May.

**SHORT-BILLED DOWICTHER (R4):** BROO 4 May (DW).

Wilson's Snipe: arr CHEN 2 Apr; few reports. Am. Woodcock: arr BROO 12 Mar.

Bonaparte's Gull: arr & max 17 River Rd 14 Apr.

#### PIGEONS - WOODPECKERS

**Red-bellied Woodpecker:** well established in all areas except higher elevations of DELA and CHEN.

Yellow-bellied Sapsucker: arr BROO 4 April. Yellow-billed Cuckoo: arr Richford 17 May; numbers reduced from recent big tent caterpillar years.

**Black-billed Cuckoo:** arr Richford 13 May; numbers reduced from recent big tent caterpillar years.

**Barred Owl:** few reports, underreported. **COMMON NIGHTHAWK (R4):** DELA 21 May (RP).

Chimney Swift: BROO 30 Apr.

**Ruby-throated Hummingbird:** arr BROO 1 May.

#### **FLYCATCHERS - WAXWINGS**

**E. Wood-Pewee:** arr BROO 9 May; increasing rep after 20 May.

**Alder Flycatcher:** arr Aqua Terra TIOG 15 May; increasing rep after 20 May.

**Willow Flycatcher:** arr Murphy's 12 May. **Least Flycatcher:** arr Murphy's 5 May.

**E. Phoebe:** arr River Walk BROO 26 Mar. **Great-crested Flycatcher:** arr CVSP 3 May; several rep after 7 May.

**E. Kingbird:** arr BROO 25 Apr; increasing rep after 5 May.

N. Shrike: no reports.

**Yellow-throated Vireo:** arr CVSP 1 May; increasing rep after 10 May.

**Blue-headed Vireo:** arr Wolfe Park BROO 22 Apr; increasing rep after 1 May.

The Kingbird 2011 September; 61 (3)

Warbling Vireo: arr Parsons Rd 1 May. Red-eyed Vireo: arr DELA 25 April, early. Fish Crow: breeding Endwell, Binghamton, Owego, Vestal, & Union.

**Com. Raven:** res in high elevation loc; nested again LHNC within half mile of city limits of Cortland; widespread and increasing resident throughout and expanding into lower elevations.

Purple Martin: DELA 23 May.

**N. Rough-winged Swallow:** arr River Rd Endwell 10 Apr.

Tree Swallow: arr TIOG 31 Mar; "big numbers" ~1 Apr; max 104 Brick Pd West Trail 15 Apr. Bank Swallow: arr BROO 26 Apr.

Cliff Swallow: arr Murphy's 3 May; ~8 nests Preble CORT June; ~4 nests Port Watson Bridge CORT June.

Barn Swallow: arr BPd 9 Apr.

**Tufted Titmouse:** inc nester along many river valleys of Region <1500'; cont to expand up to 1800-2100'; less common CHEN & DELA. **Red-breasted Nuthatch:** widespread in high

elevation state forests. **Brown Creeper:** widespread scattered rep thru

Carolina Wren: nesting along many of the major river valleys in Region and smaller ravines <1300ft; less common CHEN & DELA.

Marsh Wren: BPd 30 Apr, where nesting.

House Wren: arr CVSP 24 Apr.

Winter Wren: arr TIO 9 Apr; fairly common after mid Apr in state forests.

Golden-crowned Kinglet: uncommon early Apr; inc later in high elevation spruce plantations & larger hemlock forests.

Ruby-crowned Kinglet: arr CVSP1 9 Apr. Blue-gray Gnatcatcher: arr DELA 29 Apr. E. Bluebird: sev rep Mar; inc after March. Veery: arr TIOG 29 Apr; increasing reports after 5 May.

**Swainson's Thrush:** breeders returned to Phars WMA late May.

Hermit Thrush: arr Richford 13 Apr.

**Wood Thrush:** arr TIOG 29 Apr; widespread 10 May thru.

Gray Catbird: 2 arr TIOG 26 Apr.

N. Mockingbird: "few" overwintering birds Owego, Bing, & Cort; arr April; numbers better CORT.

**Brown Thrasher:** arr CORT 5 Apr; inc rep late Apr.

Am. Pipit: few reports mid Apr-early May.

#### **LONGSPURS – WARBLERS**

**Snow Bunting:** few CORT early Mar; last mid Mar

**Blue-winged Warbler:** arr TIOG 29 Apr; widespread, many rep.

**Tennessee Warbler:** arr BROO 3 May; max 15 BROO 15 May; inc over spring.

**Nashville Warbler:** arr Richford 30 Apr; many reports after 2 May.

**N. Parula:** arr BROO **26 Apr**, Reg record early; 10 rep.

**Yellow Warbler:** arr BROO 26 Apr; max 6 Johnson City 27 Apr.

**Chestnut-sided Warbler:** arr River Rd Endwell 26 Apr.

Magnolia Warbler: arr BROO 26Apr. Cape May Warbler: arr BROO 28 Apr, Reg record early; 5 rep.

**Black-throated Blue Warbler:** arr BROO 26 Apr.

Yellow-rumped Warbler: arr Aqua Terra 17

**Black-throated Green Warbler:** arr CVSP 24 Apr.

**Blackburnian Warbler:** arr CORT 2 May; sev rep 2 May.

 $YELLOW-THROATED\ WARBLER\ (R4):$ 

CVSP 24 APR (BK), seems to appear at CVSP every few years.

Pine Warbler: arr CVSP 9 Apr; inc number loc. Prairie Warbler: arr Endicott 29 Apr.

**Palm Warbler:** arr Bing 18 April; few rep. **Bay-breasted Warbler:** BROO 12 May; 5 reports.

**Blackpoll Warbler:** arr TIOG & CORT 13 May; 25 rep.

CERULEAN WARBLER (R4): arr BROO 12 May (CW); max 3 SkanL May (MY).

**Black-and-white Warbler:** arr BROO 26 April; few rep.

**Am. Redstart:** arr Parsons Rd 1 May. **PROTHONOTARY WARBLER (R4):** 

Wildwood Nature Reserve 13 May (NM).

**Ovenbird:** arr BROO 26 Apr, Reg record early; inc 2 May.

N. Waterthrush: arr CVSP 2 May; 6 rep. Louisiana Waterthrush: arr BROO 20 Apr; many rep Apr thru.

**KENTUCKY WARBLER (R4):** BROO 5 May (DW).

**Mourning Warbler:** arr W. Burlington 7 May; max 3 Scott 20 May.

**Com. Yellowthroat:** arr DELA 25 Apr. **Hooded Warbler:** arr BROO 10 May; scarce breeder in Reg except for CORT; territorial bird two years in a row OTSE where its rare.

WILSON'S WARBLER (R4): arr BROO 13 May; 2 rep.

Canada Warbler: arr TIOG 4 May; few reports.

#### **TOWHEES - WEAVERS**

E. Towhee: arr BROO 19 Apr; many rep 20 Apr thru.

**Am. Tree Sparrow:** last CORT early Apr. **Chipping Sparrow:** arr WPR 6 Apr.

**Field Sparrow:** arr TIOG 12 Apr; many rep 16 Apr thru.

Savannah Sparrow: arr BROO 13 Apr.

**Fox Sparrow:** arr BROO 21 Mar; sev rep thru mid Apr.

**Song Sparrow:** arr BPd7 Mar; max 20 BPd 25 Mar.

**Lincoln's Sparrow:** no reports. **Swamp Sparrow:** arr UL 10 Apr.

White-throated Sparrow: overwintered in small numbers at sev loc.

**White-crowned Sparrow:** arr Smithboro TIOG 15 Apr; last mid May.

Scarlet Tanager: arr BROO 28 Apr.

**Rose-breasted Grosbeak:** arr BROO 28 Apr; sev loc after 2 May.

**Indigo Bunting**: arr BROO 25 Apr, Reg record early; many after 10 May.

**Bobolink:** arr Knapp Hill Rd 24 Apr; inc mid May thru.

**E. Meadowlark:** arr TIOG 21 Apr; inc early Apr.

**Rusty Blackbird:** arr mid Mar; few reports Apr, no big numbers.

Baltimore Oriole: arr Bing 28 Apr.

**ORCHARD ORIOLE** (**R4**): BROO 14 May (DN).

**Purple Finch:** arr few Mar; inc 10 Apr; widespread breeding behavior May above 1000'. **White-winged Crossbill:** male at feeder Cort 4 Apr; flyover TIOG 3 May.

RED CROSSBILL (R4): few CHEN May (MY); very bad cone crop this past year, but upcoming year's cone crop looks to be excellent. Com. Redpoll: max 400 Treadwell Mar 30; good numbers across much of the central section of Reg into early Apr; last CORT 16 Apr.

"GREATER" COMMON REDPOLL (R4): like with Hoary Redpoll, a few were mixed in here and there.

HOARY REDPOLL (R4): max 3 Scott 4 Mar (MY); a few others including BROO (NM).

Pine Siskin: few lingerers Mar, small,
widen read return flight Apr early May, may 43

widespread return flight Apr-early May; max 43 BROO 16 Apr.

**Am. Goldfinch:** 20-40+ across Region Mar-Apr, average numbers.

**Evening Grosbeak:** few small flocks of 5-50 high elevations CHEN & CORT thru mid Apr.

# REGION 5—ONEIDA LAKE BASIN

# **Bill Purcell**

281 Baum Road, Hastings, New York, 13076 wpurcell@twcny.rr.com

Overall the spring season was warm and very wet. In March the average temperature was 33.3° F., 0.3° below normal, with 2.86" of precipitation, 0.16" below normal, and a total of 18.5" of snow. The April averages were 49.2°, 3.9° above normal, and 8.53" of precipitation, 5.14" above normal. The May averages were 62.8°, 5.7° above normal, with 3.90" of precipitation, 0.51" above normal. Ice out on Oneida Lake was 21 March and on Fourth Lake 22 April. Northern Herkimer County still had two feet of snow on the ground on 6 April, but then the rains took care of that.

The April rains and resultant high water in wetlands swamped some waterfowl nests, but one year of high water will have little effect on Canada Goose and Mallard populations. Once again, Snow Geese and Canada Geese migrated early, with peak flights in the first half of March. Unusual warterfowl this season were: one Greater White-fronted Goose, several Cackling Goose, and three Eurasian Wigeon. Dabbler migration highlights included many American Wigeon and Northern Pintail in the Howland Island area, large numbers of Green-winged Teal in the mucklands of Madison County, and Eurasian Wigeon at three sites.

Oneida Lake hosted large flocks of Ring-necked Ducks and up to 6,000 scaup, most of which were not separated by species due to distance and time considerations. The Oneida Lakewatch at Phillips Point was conducted for the fifth year, and numbers of White-winged Scoter, Surf Scoter, Long-tailed Duck, and Common Loon were fairly average. A flock of 11 Black Scoters was good by local spring standards, and the usual few Red-throated Loons came past. Region-wide low counts of Hooded Merganser, Red-breasted Merganser, and Ruddy Duck were most likely attributable to observer inattention. The peak flights of both Horned and Red-necked Grebes occurred on the same day at Oneida Lake. Flocks of 12 and 9 Great Egrets along Oneida Lake were unusual, and Black-crowned Night-Heron migrants were seen in Madison County and flying past Derby Hill during twilight hours.

Northerly winds and cold weather over the last two weeks of March came during the peak flight period for Cooper's Hawk and Red-shouldered Hawk at Derby Hill. The hawks migrated, but well inland from Lake Ontario. Turkey Vulture numbers were also reduced by the weather. Both Bald Eagle and Golden Eagle set new seasonal records at Derby Hill. Rare for Derby Hill were two Black Vultures and two Swainson's Hawks; another Black Vulture was seen over Cazenovia late in the season. Most raptors prefer to remain over land and not fly long distances over open water, but by checking radar Tom Carrolan may have found that large numbers of Broad-winged Hawks moved over Lake Ontario and indeed jumped from land as much as 30 miles west of Derby Hill

and the east end of the lake. The hawks could, by that time, see both the eastern and northern shore of the lake. This will require more study in future years.

Sandhill Cranes were back to more normal levels a year after few were seen last year, but there was no sign of crane courtship or even of cranes on the ground. A Piping Plover was found along the sand dunes of eastern Lake Ontario in May for the first spring record in 27 years. The plover was seen again ten days later but not reported afterwards. High water on the lake this year would make nesting difficult, and the beach gets heavy recreational use in the summer. There was a good late flight of Black-bellied Plover, Whimbrel, Ruddy Turnstone, Red Knot, and Dunlin along Oneida Lake, with most of them using the small, open islands south of Constantia for brief rests. A Willet was also found on the islands and another Willet flew by Derby Hill. Red-necked Phalarope was found in a seasonal pond and White-rumped Sandpiper in a muckland. Disappointing were Upland Sandpiper, reported from only two locations, and Short-billed Dowitcher and Pectoral Sandpiper, with only single reports of each.

Iceland Gull was not seen after mid-March, while Lesser Black-backed and Glaucous Gulls lingered into May. An adult Laughing Gull was seen at Fair Haven in late May, a single Little Gull was with migrant Bonaparte's Gulls on Oneida Lake, and Forster's Tern was seen at Brewerton and Derby Hill.

Cuckoo numbers seemed low, likely in response to the decline of tent caterpillars over much of our area. Migrant owls were scarce, with only a single Long-eared Owl reported and two Northern Saw-whet Owls heard in breeding areas. Common Nighthawk was noted at a number of sites in late May but few now breed locally. Eastern Whip-poor-will may have been down slightly in areas north of Oneida Lake. Red-headed Woodpecker reports were slightly encouraging, and a single Black-backed Woodpecker was found in the Old Forge area. Small numbers of Red-bellied Woodpeckers flying past Derby Hill in early May might represent migrants and should be monitored in the future.

Olive-sided and Yellow-bellied Flycatcher and Philadelphia Vireo reports were up over numbers of the past few years. Northern Shrike lingered into April, and a roost of over 40 Fish Crows in Syracuse was especially notable. It seems very likely that the species has expanded beyond the few spots birders have usually looked for them. At Derby Hill, the Black-capped Chickadee movement was good, but a species that often flies with them, White-breasted Nuthatch, was scarce as a migrant. Swainson's Thrush was common in the middle of May, and several Gray-cheeked Thrush were seen along Lake Ontario in late May. A large nocturnal migration over Syracuse was monitored by Lewis Grove and included many Swainson's and Gray-cheeked Thrushes plus one Bicknell's Thrush. Bohemian Waxwing had mostly departed the Region by March, but a flock was present in Oneida County into April. Gray Catbird and Brown Thrasher numbers were consistent with past years, and although a few Northern Mockingbirds were reported outside traditional breeding areas, they don't seem to be advancing their breeding range.

South winds brought the first big wave of neotropical migrants on 26 April and another on 11 May. Generally moderate weather in May meant that there

were migrants on most days as birds were continually moved through. It was a good season for Orange-crowned, Cape May, Prairie and Bay-breasted Warblers; several Prothonotary Warblers flew past Derby Hill; and two Kentucky Warblers and one Connecticut Warbler were seen. Most of the common warblers were seen in good numbers. Tennessee and Blackpoll Warblers were widespread but low counts were reported. Golden-winged Warbler can still be found on territory but often in a sea of Blue-winged Warblers. Acadian Flycatcher was a miss this season.

Migrant sparrows, such as Vesper, Lincoln's, and White-crowned, were reported in low numbers this season. Very early Chipping Sparrow and White-crowned Sparrow had likely wintered locally. Bobolink and Orchard Oriole were early arrivals. There were 11 Orchard Orioles seen passing Derby Hill, and they were reported from at least seven sites including the Mohawk Valley in Herkimer County, where they are still unusual.

No crossbills were reported for the period, not a surprise given the lack of cones. A few Hoary Redpolls were still present early in the season. Northbound Purple Finches and Common Redpolls peaked at Derby Hill in April, and Pine Siskins in May. Evening Grosbeak remained at some feeders well into April, but was quite scarce elsewhere.

For the season, 248 species were reported, 7 more than the most recent 10-year average. Highlights were many and included: Greater White-fronted Goose, Eurasian Wigeon, Black Vulture, Swainson's Hawk, Piping Plover, Willet, Whimbrel, Ruddy Turnstone, Red Knot, Red-necked Phalarope, Laughing Gull, Little Gull, Forster's Tern, Bicknell's Thrush, Prothonotary Warbler, Kentucky Warbler, Connecticut Warbler, and Clay-colored Sparrow.

# **REGION 6—ST. LAWRENCE**

# Jeffrey S. Bolsinger

98 State Street, Canton NY 13617 jsbolsinger@yahoo.com

Spring was exceptionally wet, and I heard quite a few complaints about the cold as well, although temperatures averaged above normal for much of the season. Early on it was a bit chilly, as Watertown's mean temperature for March was 29.8°F, or 1.1° below normal. The 3.4" of precipitation that fell in March was just 0.6" above normal, but April and May were very wet. Slightly more than six inches of rain fell during each of the period's last two months, and rainfall totals were 3.0" and 2.9" above average for April and May, respectively. April's mean temperature of 44.9° was 1.2° above normal, and May was even warmer, with an average temperature of 58.9°, or 2.5° above normal.

Migrants arrived to the Region in a somewhat eccentric manner, continuing a pattern that began in mid- to late February with the appearance of the first The Kingbird 2011 September; 61 (3) 259 Great Blue Herons and Killdeer. For many species that typically arrive between March and mid-April, a few individuals appeared this year on typical or early dates, sometimes remarkably early (such as an American Bittern on 23 March) but with additional individuals trickling in over an extended period so that many of these species remained scarce until well after their usual mean arrival dates. The result was that most observers felt that through at least the middle of April migration was very late. This pattern changed abruptly on the night of 26-27 April, when a warm front brought temperatures in the 80s and a flood of new arrivals. This warm front and the associated wave of first of season species was similar to late April events from the previous two years, but the timing was such that several species set new record early arrival dates for Region 6. Early arrivals were the norm for the remainder of the season.

Of the 93 species that are tracked annually to monitor mean arrival dates statewide, reasonably accurate dates were noted for 89 species this spring, with an overall mean arrival date of 25 April, five days earlier than the long-term mean, but one and two days later than the mean arrival dates for 2010 and 2009, respectively. Of these species, 67 arrived more than one day earlier than average, 23 arrived within one day of average, and just 10 arrived more than one day later then average. Species that set or tied record early arrival dates include American Bittern, Osprey, Semipalmated Plover, Killdeer, Caspian Tern, Least and Great Crested Flycatchers, Chestnut-sided and Cape May Warblers, Ovenbird, Common Yellowthroat, and Scarlet Tanager.

On the flip side, a number of wintering species lingered to fairly late dates, including good numbers of Long-tailed Ducks, Bufflehead, and Common Goldeneye well into May. Most notable among lingering species was an adult male Barrow's Goldeneye in the St. Lawrence River at Ogdensburg on 22-24 April, missing the record late date for the State by just two days. Another Barrow's Goldeneye was near Massena in early March. Also present unusually late were Bohemian Waxwings, which were present in modest numbers all winter but increased dramatically during April. On 9 April I spent a fair amount of time trying to count Bohemians in a large flock near the St. Lawrence River in Massena and finally came up with an estimate of 1130 individuals, which appears to be the second highest tally ever recorded in New York State. A flock observed in Canton on 30 April represents the latest date this species has been observed in Region 6, although about two weeks shy of the late date for New York.

Among the season's highlights was a female Spruce Grouse in Parishville at a site where this species had not been previously recorded. The grouse was initially observed by the patrons of a local bar as it wandered along the nearby roadside and even in the bar's parking lot. Melissa Burchard photographed the grouse near the bar (see page 241) and showed the photos to Carol Cady, who notified Glenn Johnson and Angie Ross. Glen and Angie eventually found a nest with four eggs, but the nest was abandoned a few days later and the fate of the adult is unknown.

There were few true rarities reported this spring, topped by the continuing Townsend's Solitaire on Point Peninsula, which successfully over-wintered and

was last seen on 20 March. On 19 March a Ross's Goose was picked out of a low-flying flock of Snow Geese over Canton. David Wheeler observed two Sandhill Cranes near Lakeview WMA in March, where this species has summered for several consecutive years and is suspected to breed, although nesting has not been documented.

Notable finch reports included a flurry of late season Hoary Redpolls and one interesting Red Crossbill report. Several observers diligently sorted through the redpolls at their feeders all winter with limited or no success picking out any Hoary Redpolls until March, when redpoll numbers increased generally and many flocks suddenly included at least 1-2 obvious Hoarys. Such was the case at my feeders, where a "Greater" Common Redpoll also appeared on 6 March. Red Crossbills were scarce in the Region, but may have nested in a few red pine plantations in the Adirondacks and on Fort Drum. Matt Young recorded songs from a flock of 12 Red Crossbills near Sevey's Corners and subsequently identified call types consistent with crossbill Types 1, 2, and 10.

Given the general paucity of birders in Region 6, it's worth mentioning the comings and goings of a few. Mike Stewart, who found the Townsend's Solitaire this past winter, is an active duty soldier and is now serving a tour of duty in Afghanistan. I'm sure I am not the only one wishing him well and looking forward to his return to New York. This past year Joan Collins moved back to Region 7, although I'm sure we'll still hear from her about birds in the St. Lawrence County portion of Adirondack Park. Still, her recent move goes a long way in explaining the lack of good arrival date information for birds that breed in the St. Lawrence County portion of the Adirondacks but are otherwise hard to find in Region 6. And finally, a welcome addition: Tony Shrimpton has started spending more time afield in Region 6, especially near Lake Ontario, where he is having some success in finding interesting shorebirds, among the most under-reported group of birds in the Region.

For the season I received reports of 230 species, which is the highest species tally for any season since I began compiling the Region 6 report. This total is certainly the result of a modest increase in observer effort in the Region, and there is certainly much room for further increases. Region 6 remains something of a frontier for birding in New York State, and there is no telling what might be found with better coverage. This season's increase in coverage is the clear high point of the spring.

outside Adirondacks.

# REGION 7—ADIRONDACK-CHAMPLAIN

===

# Melanie McCormack

PO Box 366, Keene, NY 12942 Mruddyduck@aol.com

Weather in the spring of 2011 was one for the record books, with record flooding across the Region due to a wet winter and an even wetter spring. Precipitation averaged 4-6" above normal for all three months in the Champlain Valley and the Adirondacks, making it the wettest April and May on record. April rainfall set records, with totals ranging from 4.5" in Peru to 8.7" in Old Forge and Lake Placid, only to be followed by an even wetter May, where rainfall totals ranged from 7.5" in Tupper Lake and 8.3" in Old Forge to 9.1" in Peru. The last major snowstorm of the month occurred on 6 March, dumping 24" in Tupper Lake and 37" in Ellenburg Depot. As would be expected, the culmination of rain and melting snow brought lakes and rivers across the Region to record high levels, bringing widespread flooding and causing millions of dollars in damage. Lake Champlain reached its highest level of 103.2' feet on 6 May and remained above flood stage through the end of May. Temperatures ranged 1-2° below average for the month of March, with the warmest temperatures being in the mid-50s on the 17th and 18th. In contrast, April temperatures ran 1-2° above average, with temperatures reaching the 70s near the end of the month. May was an average month for the Champlain Valley, but for the Adirondacks it ranked as the sixth warmest May on record, with temperatures ranging 4.5° above normal and reaching the mid-80s in the final days of the month.

The record flooding created challenges for birders trying to access some of the major spring migration sites, but persistence paid off with good numbers for The Kingbird 2011 September; 61 (3) 265

species diversity and rarities being reported for the season. The high water levels may have played a part in aiding the diversity of shorebirds and waders that made a brief stop in the Champlain Valley this year. Notable May migration sightings at the Chazy Riverlands include: a Little Gull on the 22<sup>nd</sup> and 29<sup>th</sup>, a Glaucous Gull on the 28<sup>th</sup>, a breeding male Wilson's Phalarope on the 28<sup>th</sup>, a record late Eurasian Wigeon on the 29th, and a Whimbrel on the 28th, which is only the second spring record for this species in the Region. A good number of shorebirds made stops in the Adirondacks as well, the highlights being 30 Greater/Lesser Yellowlegs in Tupper Lake on the 6th and 30 Short-Billed Dowitchers in Lake Placid on the 19<sup>th</sup>. Waterfowl also came through the Region in strong numbers that peaked in mid- to late March, Highlights from Ausable Point included record early Northern Shovelers on the 12<sup>th</sup>, a male Ruddy Duck on the 29<sup>th</sup>, and 12 Canvasbacks and nine Redheads in the 27<sup>th</sup>. Other notable waterfowl sightings include four Long-tailed Ducks on Long Lake on 5 April, Barrow's Goldeneye at Crown Point on 2 April, and a Red-breasted Merganser at Point Au Roche on 7 May.

The Crown Point banding station opened on 6 May for its 36<sup>th</sup> season as scheduled, with Gordon C. Howard, Bob Wei, and Gary Lee faithfully keeping the station going despite record high flooding on Lake Champlain. A total of 518 individuals were banded representing 58 species, including 15 warbler species and 16 individuals that had been captured in previous years. The oldest recapture was a Black-capped Chickadee, first banded in 2006 and now 5 years and 11 months old. The highlight of the season was undoubtedly a Grasshopper Sparrow, which became the 101<sup>st</sup> species banded at the station. Other notable birds that were banded include two Orchard Orioles, six Tennessee Warblers, one Mourning Warbler, one Prairie Warbler, and a record low 10 Yellow-rumped (Myrtle) Warblers, which usually number in the hundreds.

The spring also saw the last days of the winter invasions of redpolls, waxwings, and grosbeaks. Common Redpolls remained in good numbers through mid-March in most of the Region, but persisted in the hundreds at a feeder station in Long Lake until mid-April, with the last birds departing on 6 May. Hoary Redpolls were reported at a number of locations, and a "Greater" Redpoll was identified at a feeder on Cumberland Head on 6 March. Bohemian Waxwings persisted in flocks numbering in the hundreds in March that tapered off the first week of April, with a final report of 25 at Cumberland Head on 6 April. Evening Grosbeaks were reported in good numbers through April, with a maximum of 70 at Long Lake and a last record of four birds at Lake Alice on 30 April. Absent for much of the winter at most bird feeders, Purple Finches and American Goldfinches began visiting birdfeeders again in the last week of April.

Additional highlights include a Black-billed Cuckoo in Bellmont on 30 May and Clay-colored Sparrows in Lake Placid and at Lake Alice. A day of birding in Fort Covington on 29 May, a lesser known birding area on the edge of Franklin County, added a number of species that were not reported elsewhere in the Region, including Least Bittern, Black-crowned Night-Heron, Virginia Rail, and an impressive 27 Black Terns.

The season total was 218 species, an excellent number that just misses the record of 219 species that was set in 1997.

# **REGION 8—HUDSON-MOHAWK**

===

## Will Yandik

269 Schneider Road, Hudson NY 12534 wyandik@hotmail.com

Spring 2011 was mild and wet. March ended with 1.3 inches more than average, with another inch and a half of rain above average for April, and finally an inch above average for May. Precipitation in most cases stretched out over several drizzly days rather than in strong downpours, although flooding did occur in some parts of the Region in April and May. Twenty days in May had either drizzle or rain showers. The grass grew fast and thick, and had farmers not leapt at the chance for early cuttings when the weather dried up in June, it would have been a good year for grassland nesting birds. The last frost occurred on 22 April, and May began a long moderating trend that brought above average temperatures that lasted beyond the spring season.

Brant made a good showing in the Region this spring. Moderately sized flocks from 70-500 moved through, mostly at night, during mid- to late May. Larry Federman recalls seeing them nearly everywhere in Greene County: "Around 8 p.m. the first of several large flocks were seen over the Hudson River in the Village of Catskill, Greene County—I estimated that flock at 200. Five minutes later, heading norrthwest from west of the Village of Catskill were another 300. Ten minutes later, as I approached the intersection of Rts 23A and

32, another flock of approximately 300 were heading north, in front of the eastern face of the Catskills." Although not as widespread, Snow Geese also staged in the area in March, including a flock of 900 in Albany County. Area birders found Tundra Swans at three locations this season.

A relatively large single location maximum of eight Red-necked Grebes at Coxsackie Boat Launch is unusual for our Region. An early Great Egret showed up at Vosburgh's Marsh in Greene County on 3 April.

The Region hosted two species of kites this spring: the first, a Swallow-tailed Kite described with good details, seen in Albany County, and the second, a pair of Mississippi Kites back at their nest site in the town of Root, Montgomery County. Please see previous issues of this publication for a detailed description of these birds, the first nesting record for Mississippi Kite in the State.

Rich Guthrie found two Sandhill Cranes in Catskill in mid-April, and area birders recorded Caspian Terns at four different locations this spring. They are often not recorded most years, even though several migrate up the Hudson River to breeding locations on the Great Lakes. Bill Lee reports that he found 12 Upland Sandpipers at a single location in Ames, Montgomery County, a large number not only for the Region, but for the State as well nowadays.

Overall, no clear trend emerges for non-passerine migration. Herons and shorebirds appeared slightly later than average, with the exception of snipe and woodcock which arrive regularly in the southern part of the Region the first week of March. Duck migration is so variable in our Region that it's hard to parse out trends from the noise in any given year. Early passerines, such as kinglets, gnatcatchers, towhees, and Hermit Thrush arrived slightly early. A very strong push of neotropical migrants moved into the Region on the evenings of 27 and 28 April, nearly a week earlier than average. All species of swallows arrived early this spring. Most vireos and warblers in particular arrived early this spring.

# **REGION 9—HUDSON – DELAWARE**

## Michael Bochnik

70 Hutchinson Boulevard, Mt Vernon, NY 10552 BochnikM@cs.com

The spring was very wet but not as cool as everyone expected. The season started with temperatures in the teens on 2 March, with Poughkeepsie dipping to  $10^{\circ}$  F on 4 March. Temperatures quickly climbed and were in the seventies by 18 March. White Plains recorded 7.4" of precipitation in March mainly from two storms; both resulted in extensive flooding. A storm on 6 March dumped 2.8", and a storm from 10 to 11 March added 3.1". April continued wet, with 7.1" recorded for White Plains, 2.6" above normal. The last few days saw high temperatures into the lower eighties resulting in the month being  $2^{\circ}$  warmer than normal. This warm humid spell brought in many first arrivals. May was a mirror image of April. Half of the days had at least a trace of rain. Good migrant days were few and far between. Nearly 7" of rain fell in White Plains for May, and temperatures were  $2^{\circ}$  warmer than normal.

An early highlight of the season was a goose bonanza centered in the Black Dirt region of Orange County. It started on 2 March when John Haas, Rob Stone, and Bob Cotter noticed a huge flock of Snow Geese just east of the observation area for Liberty Marsh, Wallkill NWR. The flock was estimated between 2500 and 3000 birds. Rob Stone then found eight Greater White-fronted Geese just off Lower Road near Pine Island. He shortly found a ninth Greater White-fronted Goose at the Pine Island Turf Nursery. In addition, another flock of 3000 Snow Geese was at Missionlands Road. Nearly 10,000 Canada Geese were in the area. The next morning John Haas found nearly the same number of Canada and Snow Geese in the area, and five of the Greater White-fronted Geese. In addition, one "Blue" Snow Goose and a Cackling Goose were found along with some sort of hybrid goose and a leucistic Canada

Goose. The next day, with John and Rob keeping in touch with one another, they found at least twelve Greater White-fronted Geese in the area. After John left, Rob sifted through the massive Snow Goose flock that had resettled in the Turf Nursery and found a Ross's Goose. Later in the day Ken McDermott discovered a Barnacle Goose at the golf course in Pine Island and, along with his son Curt, observed it until nightfall.

The weekend then brought in many more observers. On Saturday, Canada and Greater White-fronted Geese numbers were down, but the number of Snow Geese at the Pine Island Turf Nursery rose to 8,000 with at least twenty-two of them blue morph. The highlights of the day were three Ross's Geese, including a rare blue morph individual found by Curt McDermott (see photo, page 244). In addition to the geese, a total of ten Tundra Swans were found between the turf nursery and the local golf course. The Barnacle Goose and three Cackling Geese were also found that day. On Sunday at least nine different Ross's Geese were observed by many, including the blue morph. Only three Greater White-fronted Geese were found and the Barnacle Goose was absent. Although out of state, it is worth mentioning that a Pink-footed Goose was present in nearby Bergen County, New Jersey during the same period. Heavy rains and flooding in the area then diminished the bonanza during the next few days.

Two months later, Rob Stone found five Black-bellied Whistling-Ducks off Oil City Road at the Wallkill NWR on 23 May. A few other birders were able to view the birds that day. No leg bands were seen. The birds were later found just south of the area in New Jersey but returned to the New York side in the late evening. They were present in the area until 26 May.

Benjamin Van Doren found a shearwater, a possible Manx Shearwater, on 17 May while watching Long Island Sound from Read Sanctuary in Rye.

Four Sandhill Cranes were observed flying overhead in Rhinebeck on 12 April. A pair was off Houston Road in Goshen on 13 April, and Ken Witkowski and Jim Schlickenrieder spotted a pair flying over while viewing the Blackbellied Ducks at Wallkill on 24 May.

Arie Gilbert and the Queens County Bird Club had a Mississippi Kite at the deli fields at the Bashakill on 22 May. A good flight of north bound hawks occurred 21 April at Hook Mountain in Nyack. A total of 787 hawks were counted as migrants and included 712 Broad-winged Hawks and 45 Sharpshinned Hawks. Jim Clinton reported a Swallow-tailed Kite on 2 May over Bulls Head Road and Centre Road in Rhinebeck, Dutchess County. It was heading southwest.

John Hass has been touting birding during south-southwest storms for years in Sullivan County. One such storm on 4 May certainly paid off. He hit the water areas first before the rains stopped. A Red-necked Grebe greeted him at Kiamesha Lake. Morningside Park revealed a Black Tern. At Neversink Reservoir seven Bonaparte's Gulls were found along with another Black Tern. A lone Bonaparte's Gull was at Swan Lake. Then it was on to the Bashakill, where a third Black Tern was found along with sixteen species of warblers highlighted by Tennessee and Cerulean Warblers.

The Varied Thrush found in late December in Wurtsboro stayed for the first three days in March to make the spring report.

Tait Johansson found a singing Dickcissel at Muscoot Farm in Somers on 22 May as he led a morning bird walk. The bird did take off and flew northwest; it could not be relocated. Another Dickcissel was found at Marshlands Conservancy on 29 May.

Ken McDermott photographed and documented an adult male European Goldfinch of unknown origin that first appeared on 21 February at a home feeder outside Pine Bush in Orange County. The bird stayed until 3 May.

Other notable species include: Eurasian Wigeon, American White Pelican, American Golden-Plover, Boat-tailed Grackle, White-winged Crossbill, Common Redpoll, and Evening Grosbeak.

## **REGION 10—MARINE**

## Seth Ausubel

118-17 Union Turnpike, Forest Hills, NY 11375 sausubel@nyc.rr.com

The spring season featured a few notable rarities, some good pelagic results, and an unusually early peak of landbird migration followed by weather conditions not conducive to concentrations of migrants.

Weather conditions this spring were closer to normal than the past several years, which were extremely warm. The average temperature in March at Islip was 40.4° F, 0.6° above normal. Precipitation was 3.04", 1.72" below normal. April and May were warmer than normal across the Region, and precipitation was near normal. April's average temperature at Islip was 50.6° F, 1.5° above normal. Precipitation was 4.40", 0.27" above normal. The average temperature in May was 62.1° F, 2.9° above normal, and precipitation was 3.81", 0.09" below normal. However, a blocking weather pattern set up across the country

The Kingbird 2011 September; 61 (3)

around 9-20 May. This resulted in a persistent low pressure trough across the east, with cloudy conditions and prevailing winds with an easterly component. In Central Park there were 17 days in May with measurable precipitation. Because of these conditions there were few days with concentrations of migrant landbirds in our area.

A modest winter finch invasion continued into the season. Common Redpolls continued into early April, with sightings of flocks numbering up to 25 in March. Small numbers of Pine Siskins were reported into April, with one late report on 24 May in Broadchannel, Queens. There were also sightings of Whitewinged Crossbills in March and April.

Rarities lingering from winter included a **Ross's Goose** in Bridgehampton, a "**Eurasian**" **Green-winged Teal** at Jamaica Bay Wildlife Refuge, and a **Varied Thrush** in Central Park through 1 May. A Red-headed Woodpecker continued in Central Park through the late date of 13 May. At least three other "**Eurasian**" **Green-winged Teals** were recorded in the Region this season, into early April. The maximum count of Harlequin Ducks at Point Lookout, Nassau County, was nine, more than in recent years. The last report was 9 April.

A pelagic trip out of Freeport, Nassau County on 27 March went as far as 25 miles offshore. Results included 250 Northern Gannets (primarily adults), 25 Bonaparte's Gulls, four Iceland Gulls, eight Lesser Black-backed Gulls, two Glaucous Gulls, two Common Murres, 230 Razorbills, and 90 unidentified large alcids. Angus Wilson, John Shemilt, and Keegan Corcoran went offshore of Shinnecock Inlet, Suffolk County on 21 May and recorded two Great Shearwaters, 22 Sooty Shearwaters, one Manx Shearwater, 385 Wilson's Storm-Petrels, one Leach's Storm-Petrel, 33 Red Phalaropes, two Arctic Terns, two Dovekies, and 18 Atlantic Puffins. Another Arctic Tern was seen by Bob Kurtz and Bobby Berlingeri at Robert Moses State Park, Suffolk County on 22 May. A Red Phalarope was seen and photographed at the unusual location of Flushing Meadow-Corona Park, Queens County on 20 May.

There were few other rarities this season. The highlight certainly was an adult White Ibis discovered at Mount Loretto Unique Area, Staten Island on 25 April by Jeff Stetson. It was re-located on 29 April a couple of miles away at Great Kills Park and seen by many, despite its habit of frequenting ponds surrounded by dense vegetation. It continued to be seen at this location through the end of May. Joan Quinlan spotted a Swallow-tailed Kite on 25 April at Robert Moses State Park. As usual, the sighting was associated with strong southerly winds, and it followed reports in New Jersey. A Eurasian Collared-Dove was seen and well described by Lauren Kras on 5 May in East Marion, Suffolk County. A White-winged Dove was present at Jones Beach West End on 15 May, discovered by Andrew Baksh and Doug Futuyma. A female Yellow-headed Blackbird was reported by Dave Eib at Jamaica Bay Wildlife Refuge on 25 May. A male Boat-tailed Grackle was seen in Central Park from 10 April through the reporting period, most unusual away from the immediate coast.

An influx of Lesser Black-backed Gulls was noted beginning in mid-May and lasting through the last days of the month. Congregations of up to eight were noted, including many immature birds.

The landbird migration in our area was inhibited by the weather conditions through what usually is the peak of the migration. Repeating the pattern of recent years, there was a major influx of both long- and short-distance migrants beginning 25 April and continuing into early May, with a seemingly odd mix of species typically considered early and late migrants. This year, peak landbird diversity occurred during this period. For example, 24 species of warblers were recorded in Central Park on 29 April, and 29 species were there on 3 May. The landbird migration was much more pronounced in the western portions of the Region than over Long Island, especially early. However, a fall-out of migrants was noted at Jones Beach State Park on 24 May including Hooded, Tennessee, Wilson's, and Blackburnian Warblers, and Bobolink.

While the landbird migration was generally unspectacular, it was a good season for incursions of a number of typically southern species into our area. Most impressive was the number of reports of Yellow-throated Warbler. At least 13 different individuals occurred in the Region. Several stayed for extended periods, including birds at Clove Lakes Park, Staten Island from 18-30 April and Forest Park, Queens County from 7-15 May. Sporadic reports beginning 23 April at Connetquot River State Park, Suffolk County, may have been an individual staying through the season. Ten or more Prothonotary Warblers occurred in the Region, including a bird at Prospect Park, Brooklyn and two at Willowbrook Park, Staten Island, in the last week of May. There were also at least 15 distinct reports of Summer Tanager, including a territorial pair discovered in East Hampton, Suffolk County on 26 May and remaining through the season.

**Common Raven** reports were again widespread in the Region. A pair nested in Kew Gardens, Queens County for the third year, but the nest was abandoned in mid-April. It is possible that major storms on 15-17 April contributed to the failure of the nest. Possible nesting activity was observed in April at the water tower in Roslyn, Nassau County, where ravens have frequently been seen during the past several years, but observers were unable to confirm the presence of a nest or observe any fledglings. Four birds were seen there on 24 April, the maximum observation of the season.

Up to 15 **Mitred Parakeets** were seen in Queens County this season, including a pair copulating at Hillcrest, and a pair returning to a nest site in Kew Gardens for approximately the sixth year. Unfortunately, many of the birds appeared unhealthy this year, exhibiting poor feather and beak condition and feather bleaching as seen in previous years. The causes may potentially include dietary deficiencies, a communicable disease, inbreeding, and/or cage wear.

**Dickcissel:** 2 Garvies Pt. Rd., Glen Cove, NASS 29 Apr (fide MN), ph P. Gildersleeve; Calverton 20 May (DK, RM).

**Bobolink:** PP 29 Apr (mob); 4 MLUA 18 May (EJ).

E. Meadowlark: several reports Calv.

**YELLOW-HEADED BLACKBIRD:** fem Jam Bay 25 May (D. Eib!).

**Boat-tailed Grackle:** CP 10 Apr thru, rare away from coast; pr prob nested Little Neck Bay, QUEE (EM).

White-winged Crossbill: 9 Gilgo Beach, SUFF 19 Mar (RBA); 4 Gilgo Beach 10 Apr (RBA); Com. Redpoll: 24 JBWE 5 Mar (SA, et al); 25 CCP 5 Mar (RK); 2 HLSP 8 Mar (RJK); 2 CP 1-3 Apr (P. Pollock, JD), last.

**Pine Siskin:** 6 PP thru 13 Mar; CP 18 Mar – 18 Apr (JD); Grymes Hill, RICH 20 Apr (HF); JBWE 25 Apr (RJK, BB); PP 30 Apr (RJ, mob); Broad Channel, QUEE 24 May (RBA).

#### **EXOTICS**

Mitred Parakeet: appx 15 Forest Hills, QUEE 19-20 Mar (KM); 12 Hillcrest, QUEE 14 Apr (J. Forrestal, SA); pr copulating Hillcrest 15 Apr (SA, RA); 6 Hillcrest 16 Apr (RJK); last Hillcrest 18 Apr (J. Forrestal); 3 Forest Hills 7 May (KM); 3 Forest Hills 10 May (SA); 2 Kew Gardens, mid-May thru, pr returning to nest site (A. Craig); *intro*.

**European Goldfinch:** Grymes Hill 17 Apr (HF).

# STANDARD ABBREVIATIONS

Regional rarities appear in BOLD; county names are shortened to their first four letters and appear in UPPER CASE letters; months are shortened to their first three letters. In species accounts: number of individuals omitted implies that one individual was reported; ! – details seen by Regional Editor; ad – adult; Alt – Alternate plumage; Am. – American; arr – arrival or first of season; BBS - Breeding Bird Survey; BOTS – bird of the season; CBC – Christmas Bird Count; CO – confirmed nesting; Com. – Common; E. – Eastern; FL – fledgling; FY – adult feeding young; I – Island; imm – immature; *intro* – see introduction to report; juv – juvenile; L – Lake; max – maximum; mob – multiple observers; N. – Northern; NYSDEC – New York State Department of Environmental Conservation; NWR – National Wildlife Refuge; NYSARC – report to New York State Avian Records Committee; P – park; Pd – Pond; ph – photographed; Pt – Point; Res – Reservoir; Ri – River; SP – State Park; spm – specimen; subad – subadult; T – Town of; thru – throughout period; Twn – township; W. – Western; WMA – Wildlife Management Area; y – young.

## REPORTING REGIONS

Regional boundaries coincide with county lines, except at:

Region 1-Region 2 in Orleans, Genesee and Wyoming Counties: the boundary is NY Route 98 from Pt. Breeze to Batavia; NY Route 63 from Batavia to Pavilion, and NY Route 19 from Pavilion to the Allegany County line.

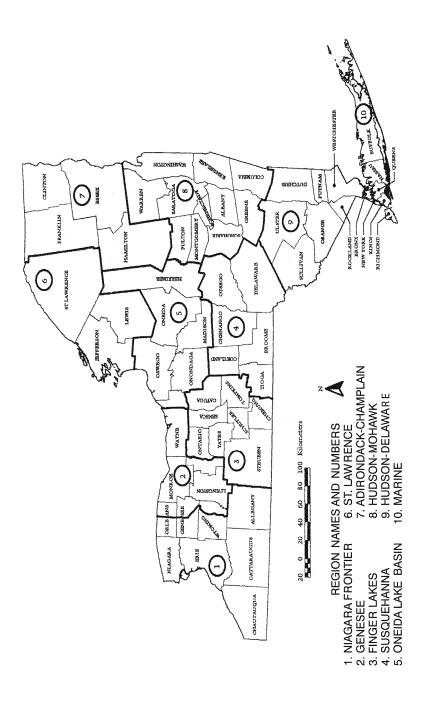

Region 2-Region 3 in Ontario County: the boundary is Mud Creek to NY Route 64, NY Route 64

from Bristol Center to S. Bristol Springs, and Route 21 from S. Bristol Springs to the Yates County line.

Region 3-Region 5 in Cayuga County: the boundary is NY Route 31.

## REPORTING DEADLINES

Winter Season: December, January, February
Deadline is 7 March
Spring Season: March, April, May
Deadline is 7 June
Summer Season: June, July, August
Deadline is 7 September
Fall Season: September, October, November
Deadline is 7 December
